teachers cannot teach what they do not know this country has tolerated a weak licensing system for prospective teachers for decades this weak system has been accompanied by an increasingly emptier curriculum for most students depriving them of the knowledge and skills needed for self government an empty curriculum how teacher licensure tests lead to empty student minds makes the case that the complete revision of the licensing system for prospective and veteran teachers in massachusetts in 2000 and the construction of new or more demanding teacher licensing tests contributed significantly to the massachusetts education miracle that miracle consisted of enduring gains in achievement for students in all demographic groups and in all regional vocational technical high schools since 2005 gains confirmed by tests independent of massachusetts policy makers the immediate purpose of this book is to explain what massachusetts did in 2000 to strengthen its teacher licensing and re licensing system to ensure that all teachers could teach to relatively strong k 12 standards its larger purpose is to suggest that development of strong academic standards in all major subjects should be followed by complete revision of a state s teacher licensing system not as has been the case for several decades the development of k 12 student tests if this country wants to strengthen public education

this book addresses sample size and power in the context of research offering valuable insights for graduate and doctoral students as well as researchers in any discipline where data is generated to investigate research questions it explains how to enhance the authenticity of research by estimating the sample size and reporting the power of the tests used further it discusses the issue of sample size determination in survey studies as well as in hypothesis testing experiments so that readers can grasp the concept of statistical errors minimum detectable difference effect size one tail and two tail tests and the power of the test the book also highlights the importance of fixing these boundary conditions in enhancing the authenticity of research findings and improving the chances of research papers being accepted by respected journals further it explores the significance of sample size by showing the power achieved in selected doctoral studies procedure has been discussed to fix power in the hypothesis testing experiment one should usually have power at least 0.8 in the study because having power less than this will have the issue of practical significance of findings if the power in any study is less than 0.5 then it would be better to test the hypothesis by tossing a coin instead of organizing the experiment it also discusses determining sample size and power using the freeware g power software based on twenty one examples using different analyses like t test parametric and non parametric correlations multivariate regression logistic regression independent and repeated measures anova mixed design manova and chi square

this book explains how to analyze independent data from factorial designs without having to make restrictive assumptions such as normality of the data or equal variances the general approach also allows for ordinal and even dichotomous data the underlying effect size is the nonparametric relative effect which has a simple and intuitive probability interpretation the data analysis is presented as comprehensively as possible including appropriate descriptive statistics which follow a nonparametric paradigm as well as corresponding inferential methods using hypothesis tests and confidence intervals based on pseudo ranks offering clear explanations an overview of the modern rank and pseudo rank based inference methodology and numerous illustrations with real data examples as well as the necessary r sas code to run the statistical analyses this book is a valuable resource for statisticians and practitioners alike
