this book provides detailed information on how to set up deep energy retrofits ders in public buildings and shares in depth insights into the current status of the major technologies strategies and best practice examples of how to cost effectively combine them case studies from the u s a and europe show that that deep energy retrofit can be achieved with a limited core technologies bundle readily available on the market characteristics of some of these core technology measures depend on the technologies available on an individual nation s market on the minimum requirements of national standards and on economics as determined by a life cycle cost analysis also requirements to building envelope related technologies e g insulation levels windows vapor and water barriers and requirements for building airtightness depend on specific climate conditions this guide provides best practice examples of how to apply these technologies in different construction situations high levels of energy use reduction using core technology bundles along with improvements in indoor climate and thermal comfort can be only achieved when a deep energy retrofit adopts a quality assurance process in

addition to design construction commissioning and post occupancy phases of the quality assurance process the guide emphasizes the importance of clearly and concisely formulating and documenting the owner's goals expectations and requirements for the renovated building during development of the statement of work another important component of the quality assurance process is a procurement phase during which bidders qualifications their understanding of the scope of work and its requirements and their previous experience are analyzed the building sector holds the potential for tremendous improvements in terms of energy efficiency and reducing carbon emissions and energy retrofits to the existing building stock represent a significant opportunity in the transition to a low carbon future moreover investing in highly efficient building materials and systems can replace long term energy imports contribute to cost cutting and create a wealth of new jobs yet while the technologies needed in order to improve energy efficiency are readily available significant progress has not yet been made and best practices for implementing building technologies and renewable energy sources are still relegated to small niche applications offering essential information on deep energy retrofits the book offers a valuable asset for architects public authorities project developers and engineers alike

the results presented in this book summarize the main findings of the carbofor project which brought together 52 scientists from 14 research units to investigate the effects of future climate on the carbon cycle the productivity and vulnerability of french forests this book explains the current forest carbon cycle in temperate and mediterranean climates including the dynamics of soil carbon and the total carbon stock of french forests based on forest inventories it reviews and illustrates the main ground based methods for estimating carbon stocks in tree biomass spatial variations in projected climate change over metropolitan france throughout the 21st century are described the book then goes on to consider the impacts of climate change on tree phenology and forest carbon balance evapotranspiration and production as well as their first order interaction with forest management alternatives the impact of climate change on forest vulnerability is analysed a similar simulation study was carried out for a range of pathogenic fungi emphasizing the importance of both warming and precipitation changes the consequences of climate change on the occurrence of forest fires and the forest carbon cycle in the mediterranean zone are also considered a valuable reference for researchers and academics forest engineers and managers and graduate level students in forest ecology ecological modelling and forestry

climate change has been the subject of thousands of books and magazines scientific journals and newspaper articles daily it's a subject that can be very political and emotional often blurring the lines between fact and fiction the vast majority of research studies projections and recommendations tend to focus on the human influence on climate change and global warming as the result of co2 emissions often to the exclusion of other threats that include population growth and the stress placed on energy sources due to emerging global affluence climate vulnerability five volume set seeks to strip away the politics and emotion that surround climate change and will assess the broad range of threats using the bottom up approach including co2 emissions population growth emerging affluence and many others to our five most critical resources water food ecosystems energy and human health inclusively determining what these threats are while seeking preventive measures and adaptations is at the heart of this unique reference work takes a bottom up approach addressing climate change and the threat to our key resources at the local level first and globally second providing a more accurate and inclusive approach includes extensive cross referencing which is key to readers as new connections between factors can be discovered cuts across a number of disciplines and will appeal to biological science earth environmental science ecology and social science comprehensively addressing climate change and other threats to our key resources from multiple perspectives
