cardiovascular diseases pose an enormous clinical challenge remaining the most common cause of death in the world β adrenoceptors play an important role on cardiac vascular and or endothelial function at a cellular level with relevant applications in several cardiovascular diseases such as heart failure and hypertension g protein coupled receptors gpcrs including β adrenergic receptors constitute the most ubiquitous superfamily of plasma membrane receptors and represent the single most important type of therapeutic drug target sympathetic nervous system hyperactivity which characterizes several cardiovascular diseases such as heart failure and hypertension as well as physiological ageing has been proved to exert in the long term detrimental effects in a wide range of cardiovascular diseases acutely sympathetic hyperactivity represents the response to an insult to the myocardium aiming to compensate for decreased cardiac output this process involves the activation of beta adrenergic receptors by catecholamine with consequent heart rate and cardiac contractility increase however long term exposure of the heart to elevated norepinephrine and epinephrine levels originating from sympathetic nerve endings and chromaffin cells of the adrenal gland results in further progressive deterioration in cardiac structure and function at the molecular level sustained sympathetic nervous system hyperactivity is responsible for several alterations including altered beta adrenergic receptor signaling and function down regulation desensitization moreover the detrimental effects of catecholamine affect also the function of different cell types including but not limited to endothelial cells fibroblasts and smooth muscle cells thus the success of beta blocker therapy is due at least in part to the protection of the heart and

the vasculature from the noxious effects of augmented catecholamine levels the research topic aimed to support the progress towards understanding the role of sympathetic nervous system under physiological conditions and the contribution of its hyperactivity in the pathogenesis and progression of cardiovascular diseases
