computer managed presentations in computer based training educational software applications
the computer assumes the teaching role in computer managed presentations you maintain the

responsibility for teaching the learners and use what is contained in the presentation as a resource in a sense computer managed presentations are a subset of computer based training educational software applications their differences will be highlighted throughout this book this book will not make you an expert in designing computer based training educational software applications expertise comes through years of experience and continual learning however this book will provide you with the foundations for creating professional instructionally effective products to gain support for your computer based training educational software applications and computer managed presentations and to silence the critics it is important to create excellent products people will notice quality much more than quantity this is especially true for your first project this book with its numerous practical hints will help you do it right from your first project onward

what is heat treatment this book describes heat treating technology in clear concise and nontheoretical language it is an excellent introduction and guide for design and manufacturing engineers technicians students and others who need to understand why heat treatment is specified and how different processes are used to obtain desired properties the new second edition has been extensively updated and revised by jon l dossett who has more than forty years of experience in heat treating operations and management the update adds important information about new processes and process control techniques that have been developed or refined in recent years helpful appendices have been added on decarburization of steels boost diffuses cycles for carburizing and process verification

mobile robotics a practical introduction is an excellent introduction to the foundations and methods used for designing completely autonomous mobile robots in this book you are introduced to the fundamental concepts of this complex field via twelve detailed case studies

which show how to build and program real working robots this book provides a very practical introduction to mobile robotics for a general scientific audience and is essential reading for final year undergraduate students and postgraduate students studying robotics artificial intelligence cognitive science and robot engineering its update and overview of core concepts in mobile robotics will assist and encourage practitioners of the field and set challenges to explore new avenues of research in this exciting field

nicomachean ethics vi is considered one of classical philosophy s greatest achievements aristotle on practical wisdom is the first full scale commentary on this work to be issued in over a century and is the most comprehensive and philosophically illuminating to date a meticulous translation coupled with facing page analysis enables readers to engage directly with the account of phronêsis or practical wisdom that aristotle is developing while a full introduction locates that account in the context of his ethical thought and of later ethical thought more generally the commentary discusses the text line by line illuminating obscure passages explaining technical ones and providing a new overall interpretation of the work and the nature of practical reason a companion volume action contemplation and happiness expands on this interpretation to provide a startling new picture of aristotle s thought as a whole although the two books can be approached separately together they constitute one of the most daring and original contemporary readings of aristotle s philosophy aimed at committed students of these notoriously difficult writings c d c reeve s engaging and lucid books should find a wide audience among philosophers classicists and all readers willing to wrestle with a thinker of unparalleled subtlety depth and scope

trackability and tracking of general linear systems deals with five classes of the systems three of which are new begins with the definition of time together with a brief description of its crucial

properties and with the principles of the physical uniqueness and continuity of physical variables they are essential for the natural tracking control synthesis the book presents further new results on the new compact simple and elegant calculus that enabled the generalization of the transfer function matrix concept and of the state concept the completion of the trackability and tracking concepts together with the proofs of the trackability and tracking criteria as well as the natural tracking control synthesis for all five classes of the systems features crucially broadens the state space concept and the complex domain fundamentals of the dynamical systems to the control systems addresses the knowledge and ability necessary to study and design control systems that will satisfy the fundamental control goal outlines new effective mathematical means for effective complete analysis and synthesis of the control systems upgrades completes and essentially generalizes the control theory beyond the existing boundaries provides information necessary to create and teach advanced inherently upgraded control courses
