andrew mack immersed himself in a vast expanse of roadless old growth rainforest of papua new guinea in 1987 he and his co investigator debra wright built a research station by hand and lived there for years their mission was to study the secretive and perhaps most dinosaur like creature still roaming the planet the cassowary the ensuing adventures of this unorthodox biologist costudying seeds found in cassowary droppings pekpek learning to live among the indigenous pawaiocoia traversing jungles fighting pests and loneliness struggling against unscrupulous oil speculators and moreocoare woven into a compelling tale that spans two decades a mack shares the insights he garnered about rainforest ecology while studying something as seemingly mundane as cassowary pekpek he ultimately gained profound insight into why conservation is failing in places like papua new guinea and struggled to create a more viable strategy for conserving some of earthcos last wild rainforests

meet the ladies a flock of smart affectionate highly individualistic chickens who visit their favorite neighbors devise different ways to hide from foxes and mob the author like she s a rock star in these pages you ll also meet maya and zuni two orphaned baby hummingbirds who hatched from eggs the size of navy beans and who are little more than air bubbles fringed with feathers their lives hang precariously in the balance but with human help they may one day conquer the sky snowball is a cockatoo whose dance video went viral on youtube and who s now teaching schoolchildren how to dance you ll meet harris s hawks named fire and smoke and you ll come to know and love a host of other avian characters who will change your mind forever about who birds really are each of these birds shows a different and utterly surprising aspect of what makes a bird a bird and these are the lessons of birdology that birds are far stranger more wondrous and at the same time more like us than we might have dared to imagine in birdology beloved author of the good good pig sy montgomery explores the essence of the otherworldly creatures we see every day by way of her adventures with seven birds wild tame exotic and common she weaves new scientific insights and narrative to reveal seven kernels of bird wisdom the first lesson of birdology is that no matter how common they are birds are individuals as each of montgomery s distinctive ladies clearly shows in the leech infested rain forest of queensland you ll come face to face with a cassowary a 150 pound man tall flightless bird with a helmet of bone on its head and a slashing razor like toenail with which it occasionally eviscerates people proof that birds are dinosaurs you ll learn from hawks that birds are fierce from pigeons how birds find their way home from parrots what it means that birds can talk and from 50 000 crows who moved into a small city s downtown that birds are everywhere they are the winged aliens who surround us birdology explains just how very other birds are their hearts look like those of crocodiles they are covered with modified scales which are called feathers their bones are hollow their bodies are permeated with extensive air sacs they have no hands they give birth to eggs yet despite birds and humans disparate evolutionary paths we share emotional and intellectual abilities that allow us to communicate and even form deep bonds when we begin to comprehend who birds really are we deepen our capacity to approach understand and love these otherworldly creatures and this ultimately is the priceless lesson of birdology it communicates a heartfelt fascination and awe for birds and restores our connection to these complex mysterious fellow creatures

the action plan for australian birds 2010 is the third in a series of action plans that have been produced at the start of each decade the book analyzes the international union for conservation of nature iucn status of all the species and subspecies of australia s birds including those of the offshore territories for each bird the size and trend in their population and distribution has been analyzed using the latest iteration of iucn red list criteria to determine their risk of extinction the book also provides an account of all those species and subspecies that are or are likely to be extinct each categorization is justified on the basis of the latest research including much unpublished material that has been made available during workshops conducted with leading ornithologists and conservation biologists around the country as well as phone interviews and correspondence the result is the most authoritative account yet of the status of australia s birds in this completely revised edition each account covers not only the 2010 status but provides a retrospective assessment of the status in 1990 and 2000 based on current knowledge taxonomic revisions and changes to the iucn criteria and then reasons why the status of some taxa has

changed over the last two decades maps have been created specifically for the action plan based on vetted data drawn from the records of birds australia its members and its partners in many government departments the book contains some surprises some alarming some encouraging the status of some birds has improved over the last two decades as a result of dedicated conservation management some may not have changed status but at least they are holding their own many however are continuing to decline and a distressing number are new to the list there is also an increasing number of birds for which captive insurance populations need not only to be considered as a future option but actively pursued before it is too late but this is not a book of lost causes it is a call for action to keep the extraordinary biodiversity we have inherited and pass the legacy to our children every one of australia s threatened taxa can be saved this book describes the populations of species at greatest risk and outlines ways we can turn them around key features readily accessible status information with reasons for listing synopsis of principal features that influence listing list of actions needed for conservation includes specially commissioned distribution maps
