this book introduces the linkage between evolutionary computation and complex networks and the advantages of cross fertilising ideas from both fields instead of introducing each field individually the authors focus on the research that sits at the interface of both fields the book is structured to address two questions 1 how complex networks are used to analyze and improve the performance of evolutionary computation methods 2 how evolutionary computation methods are used to solve problems in complex networks the authors interweave complex networks and evolutionary computing using evolutionary computation to discover community structure while also using network analysis techniques to analyze the performance of evolutionary algorithms the book is suitable for both beginners and senior researchers in the fields of evolutionary computation and complex networks

every day more and more kinds of historical data become available opening exciting new avenues of inquiry but also new challenges this updated and expanded book describes and demonstrates the ways these data can be explored to construct cultural heritage knowledge for research and in teaching and learning it helps humanities scholars to grasp big data in order to do their work whether that means understanding the underlying algorithms at work in search engines or designing and using their own tools to process large amounts of information demonstrating what digital tools have to offer and also what digital does to how we understand the past the authors introduce the many different tools and developing approaches in big data for historical and humanistic scholarship show how to use them what to be wary of and discuss the kinds of questions and new perspectives this new macroscopic perspective opens up originally authored live online with ongoing feedback from the wider digital history community exploring big historical data breaks new ground and sets the direction for the conversation into the future exploring big historical data should be the go to resource for undergraduate and graduate students confronted by a vast corpus of data and researchers encountering these methods for the first time it will also offer a helping hand to the interested individual seeking to make sense of genealogical data or digitized newspapers and even the local historical society who are trying to see the value in digitizing their holdings

the emerging field of network science represents a new style of research that can unify such traditionally diverse fields as sociology economics physics biology and computer science it is a powerful tool in analyzing both natural and man made systems using the relationships between players within these networks and between the networks themselves to gain insight into the nature of each field until now studies in network science have been focused on particular relationships that require varied and sometimes incompatible datasets which has kept it from being a truly universal discipline computational network science seeks to unify the methods used to analyze these diverse fields this book provides an introduction to the field of network science and provides the groundwork for a computational algorithm based approach to network and system analysis in a new and important way this new approach would remove the need for tedious human based analysis of different datasets and help researchers spend more time on the qualitative aspects of network science research demystifies media hype regarding network science and serves as a fast paced introduction to state of the art concepts and systems related to network science comprehensive coverage of network science algorithms methodologies and common problems includes references to formative and updated developments in the field coverage spans mathematical sociology economics political science and biological networks
