The global financial markets are not just driven by the big investment houses and fund managers. Along with these private banks, insurance houses, hedge funds, sovereign wealth funds, and a range of boutique investment managers, regional institutions and brokers of different sizes and nationalities all operate and interact to form the bedrock of the global financial infrastructure. Because of this, it is essential that practitioners and observers of the markets fully understand the linkages, objectives, and functions of these institutions and the new and dynamic environment they are working in. Market players provides a complete roadmap to the institutions and intermediaries operating in today's global financial landscape, illustrating what they are, how they work, how they interact, and, importantly, their motivation. It explains the core financial market business of these institutions and considers how they have become the firms that we see today, providing readers with a clear understanding of which market sectors are likely to see the most involvement from the different types of institution and, importantly, why they are involved in these market areas. Key features include a series of case studies looking at examples of some of these institutions, including an explanation of the EIB and the UK agency UKFI. They also look at the financial crisis and the impact on AIG and Northern Rock, two institutions that clearly illustrate what can go wrong and how the other market players have to step in when this happens. An international perspective looking at representative institutions from Europe, Asia, and North America showing global similarities and differences. A post-financial crisis perspective on the structure of international banks in today's markets. Coverage of the major players on both the buy and sell side of the market. Written in plain English. Market players is an accessible and much-needed guide to financial institutions, equipping readers with the knowledge to better understand how the global financial markets really work.

Institutions fix the confines of and impose form upon the activities of human beings. Walton Hamilton, Institutions, 1932. The World Development Report 2002: Building Institutions for Markets undertakes the complex issue of the basic institutions needed for markets to function properly. This year's World Development Report goes beyond a simple examination of institutional structure and explores the functions of institutions, recognizing that one size does not fit all. The report asks what do all institutions which support markets do? The answer is simple: institutions channel information, define and enforce property rights, and increase or prevent competition. Understanding the functions that current institutions and their proposed replacements would provide is the first step. The report contends that once you have identified the institutional functions that are missing, you can then build effective institutions by following some basic principles: complement what exists already in terms of other supporting institutions; human capacities and technology innovate to suit local norms and conditions; experimenting with new structures can provide a country with creative solutions that work; connect communities of market players through open information flows; and open trade and information flows create demand for new institutions and improve the functioning of existing structures. Compete among

jurisdictions firms and individuals increased competition creates demand for new institutions as old ones lose their effectiveness it also affects how people behave improving institutional quality these broad lessons and careful analyses which links theory with pertinent evidence are provided in the report world development report 2002 building institutions for markets contains selected world development indicators
