environmental economics has established itself as one of its field's most authoritative texts as well as one of the more challenging. It distinguishes itself from other books by presupposing that readers already have an understanding of intermediate microeconomics; thus, this book concentrates only on environmental economics problems of pollution of earth, air, and water, with an emphasis on regulation and private sector anti-pollution incentives and coverage of international examples.

The book includes the author's most important work on a variety of topics, including the Hotelling model of spatial competition as applied to resource economics, jurisdictional tax competition, particularly in the context of resource taxes and environmental regulation, both theoretical and empirical.

many of the frontiers of environmental economics research are at the interface of large scale and long term environmental change with national and global economic systems this is also where some of the most of challenging environmental policy issues occur volume 3 of the handbook of environmental economics provides a synthesis of the latest theory on economywide and international environmental issues and a critical review of models for analyzing those issues it begins with chapters on the fundamental relationships that connect environmental resources to economic growth and long run social welfare the following chapters consider how environmental policy differs in a general equilibrium setting from a partial equilibrium setting and in a distorted economy from a perfect economy the volume closes with chapters on environmental issues that cross or transcend national borders such as trade and the environment biodiversity conservation acid rain ozone depletion and global climate change the volume provides a useful reference for not only natural resource and environmental economists but also international economists development economists and macroeconomists

this latest fifth assessment report of the ipcc will again form the standard reference for all those concerned with climate change and its consequences

robert n stavins has emerged as one of the most influential voices in environmental economics over the last decade and a half these 23 essays on environmental economics and policy written by professor stavins and his co authors over the period 1988 1999 originally appeared in a diverse set of leading scholarly periodicals and are here collected for the first time the book is divided into seven parts overview benefits and costs of environmental regulation normative analysis of policy instruments positive analysis of policy instruments environmental technology innovation and diffusion causes and

consequences of land use changes and global climate policy the book begins with an introductory essay in which Stavins reflects on the professional path that led to his research and writing and identifies common themes that emerge from this period of research. Students, scholars, practitioners, and policymakers will find this volume a valuable and very useful addition to their collection.

This volume consists of papers covering six key topics: cost-benefit analysis, the approaches of economists and ecologists, the pros and cons of alternative valuation methods, contingent valuation, environmental benefit estimates, and the establishment of research priorities.

Over the last decade, market-based incentives have become the regulatory tool of choice when trying to solve difficult environmental problems. Evidence of their dominance can be seen in recent proposals for addressing global warming through an emissions trading scheme in the Kyoto Protocol and for amending the Clean Air Act to add a new emissions trading system for smog precursors and mercury. The Bush Administration's Clear Skies program, they are widely viewed as more efficient than traditional command-and-control regulation. This collection of essays takes a critical look at this question and evaluates whether the promises of market-based regulation have been fulfilled. Contributors put forth the ideas that few regulatory instruments are actually purely market-based or purely prescriptive and that both approaches can be systematically undermined by insufficiently careful design and by failures of monitoring and enforcement. All in all, the essays recommend future research that no longer pits one kind of approach against the other but instead examines their interaction and compatibility. This book should appeal to academics in environmental economics and law, along with policymakers in government agencies and advocates in non-governmental organizations.

This outstanding new collection surveys the relationship between the environment and development and highlights some of the tensions that are implicit in the notion of sustainable development. Environmental Economics and Development is organized into six sections: general aspects, resource utilization and management, valuation and accounting of environmental change, environmental policy instruments, adjustment, trade, and the environment, and distributional issues. These areas include general features of environment-development interfaces, operational valuation and accounting methods, and economic approaches to environmental policy instruments in developing countries and in the international context.

This conference proceedings analyses the key issues in the FDI and environment relationship.

Preliminary drafts of the articles were previously presented at the Third Annual Global Conference on Environmental Taxation: Issues, Experience, and Potential, which was held on April 12-13, 2002, in Woodstock, Vermont, U.S.A. Preface p. vii-v. 1

The Economic Approach to Environmental Policy draws together a selection of Myrick Freeman's most influential papers on key analytical and policy issues in the field of environmental economics. The papers collected in this significant volume cover a wide range of topics pertinent to the study of environmental economics, including the effects of environmental and resource policies on the distribution of income, the incorporation of distribution effects into environmental policy analysis, the role of economic incentives in environmental policy, the economic valuation of environmental changes, the consideration of risk and uncertainty in economic valuation and policy making. This outstanding collection also includes several papers that communicate in a non-technical way the ethical basis of

environmental economics and the economic approach to environmental policy it will be of great interest to academics and policymakers concerned with working in the area of environmental economics
