this book is about relations between three different areas of mathematics and theoretical computer science combinatorial group theory cryptography and complexity theory it explores how non commutative infinite groups which are typically studied in combinatorial group theory can be used in public key

cryptography it also shows that there is remarkable feedback from cryptography to combinatorial group theory because some of the problems motivated by cryptography appear to be new to group theory and they open many interesting research avenues within group theory in particular a lot of emphasis in the book is put on studying search problems as compared to decision problems traditionally studied in combinatorial group theory then complexity theory notably generic case complexity of algorithms is employed for cryptanalysis of various cryptographic protocols based on infinite groups and the ideas and machinery from the theory of generic case complexity are used to study asymptotically dominant properties of some infinite groups that have been applied in public key cryptography so far this book also describes new interesting developments in the algorithmic theory of solvable groups and another spectacular new development related to complexity of group theoretic problems which is based on the ideas of compressed words and straight line programs coming from computer science

this volume contains the invited lectures invited symposia symposia papers and posters presented at the 2nd european cognitive science conference held in greece in may 2007 the papers presented in this volume range from empirical psychological studies and computational models to philosophical arguments meta analyses and even to neuroscientific experimentation the quality of the work shows that the cognitive science society in europe is an exciting and vibrant one there are 210 contributions by cognitive scientists from 27 different countries including usa france uk germany greece italy belgium japan spain the netherlands and australia this book will be of interest to anyone concerned with current research in cognitive science

this book contains the best papers of the seventh international conference on enterprise information systems iceis 2005 held in miami usa and organized by insticc institute for systems and technologies of information communication and control in collaboration with florida international university who hosted the event following the route started in 1999 iceis has become a major point of contact between research scientists engineers and practitioners on the area of business applications of information systems this conference which is now one of the largest annual conferences in the information systems area has received an increased interest every year especially from the international academic community this year five simultaneous tracks were held covering different aspects related to enterprise computing including databases and information systems integration artificial intelligence and decision support systems information systems analysis and specification software agents and internet computing and human computer interaction the sections of this book reflect the conference tracks iceis 2005 received 459 paper submissions from 41 different countries in all continents 89 papers were published and orally presented

as full papers i e completed work 110 position papers reflecting work in progress were accepted for short presentation and another 90 for poster presentation these numbers leading to a full paper acceptance ratio below 20 show the intention of preserving a high quality forum

the subject matter has been discussed in such a simple way that the students will find no difficulty to understand it the proof of various theorems and examples has been given with minute details each chapter of this book contains complete theory and fairly large number of solved examples sufficient problems have also been selected from various universities examination papers contents inventory control non linear programming methods problem analysis queuing theory

what are the special problems involved in surveying immigrant populations and ethnic minorities how can we ensure adequate representation of these growing groups in general population surveys this book is the first to address these challenges in a systematic way experiences from eight western countries involving more than a dozen surveys are used to explore difficulties in designing these types of surveys and some of the choices made to deal with them the rich array of cases covered gives rise to valuable lessons from local and national surveys from well funded surveys and those with limited means and on a wide variety of topics ranging from politics to health
