this book does for naval anti aircraft defence what the author s naval firepower did for surface gunnery Û it makes a highly complex but historically crucial subject accessible to the layman it chronicles the growing aerial threat from its inception in the first world war and the response of each of the major navies down to the end of the second highlighting in particular the widely underestimated danger from dive bombing central to this discussion is an analysis of what effective aa fire control required and how well each navy s systems actually worked it also takes in the weapons themselves how they were placed on ships and how

this reflected the tactical concepts of naval aa defence as would be expected from any friedman book it offers striking insights Û he argues for example that the royal navy so often criticised for lack of air mindedness was actually the most alert to the threat but that its systems were inadequate not because they were too primitive but because they tried to achieve too much the book summarises the experience of ww2 particularly in theatres where the aerial danger was greatest and a concluding chapter looks at post 1945 developments that drew on wartime lessons all important guns directors and electronics are represented in close up photos and drawings and lengthy appendices detail their technical data it is simply another superb contribution to naval technical history by its leading exponent
