this book reviews the construction of elementary systems living in de sitter ds
 spacetime in both the classical and quantum senses field theories on ds spacetime are
 among the most studied mathematical models of the universe whether for its earlier
 period inflationary phase or for its current phase of expansion acceleration dark energy
 or cosmological constant classical elementary systems are hamiltonian phase spaces
 which are associated with co adjoint orbits of the relativity group on the other hand
 quantum elementary systems are associated with projective unitary irreducible
 representations of the possibly extended relativity group or one of its covering this
 study emphasizes the conceptual issues arising in the formulation of such systems and
 discusses known results in a mathematically rigorous way particular attention is paid to
 smooth transition from classical to quantum theory physical content under vanishing
 curvature from the point of view of a local tangent minkowskian observer and thermal
 interpretation on the quantum level in the sense of the gibbons hawking temperature
 such a mathematical construction is of paramount importance to the understanding of
 the early universe due to the critical role that the ds metric plays in the inflationary
 cosmological scenarii as well as to the construction of possible models for late time
 cosmology since a small positive cosmological constant or dark energy seems to be
 required by recent data in this sense this book uniquely blends mathematical physics
 spacetime symmetry on classical and quantum levels and theoretical physics
 quantization quantum field theory and cosmology moreover the level of exposition
 varies in different parts of the book so that both experts and beginners alike can utilize
 the book

sedimentation and tectonics in rift basins red sea gulf of aden presents new case studies
 and synthesises the results of recent research on the sedimentological evolution of the
 red sea gulf of aden rift system this rift basin is generally regarded as the best natural
 geological laboratory in the world in which to study the processes of rift formation
 uplift of the rift margins in an arid climate results in extensive three dimensional

exposures of pre and syn rift strata and associated structures these serve as analogues for the understanding and hydrocarbon exploration of deeper buried rift systems on continental margins such as the north sea and the atlantic margins the red sea gulf of aden rift is also exceptional in that its stratigraphy spans all stages from pre rift environments syn rift continental to marine environments through the rift to drift transition to post rift sea floor spreading the work is arranged in eight sections following a review of the sedimentology and stratigraphy of rift basins the magmatism and structural evolution of the red sea gulf of aden rift is reviewed subsequently new case studies are presented of the early rifting environment syn rift sedimentation tectonics and diagenesis evaporites and salt tectonics post rift sediments of the axial trough are then discussed along with studies of reefs coastal zone and shelf sediments and the tectonic geomorphology of the rift margin escarpment this work results from extensive new research in the rift basin largely carried out under collaborative research projects by european and middle eastern geologists it will be an invaluable reference work for geoscientists in the hydrocarbon groundwater and mineral extraction industries as well as for researchers in university departments of earth sciences mining and physical geography
