this report examines heterogeneity in young adult outcomes among students at risk for school failure due to low socioeconomic status. It addresses the question among students at risk due to status characteristics: what are the relationships of high school engagement and attainments with post high school outcomes? Two sets of outcomes are considered: entry and persistence in postsecondary education and employment and income as a young adult. The report distinguishes between status risk factors such as SES and race/ethnicity and two other sets of risk factors: behavioral risk factors and academic risk factors. Behavioral risk factors are behaviors and attitudes closely related to learning, for example, attendance, paying attention to the teacher, completing coursework, and developing a sense that schooling is important to future life successes. These behaviors and attitudes are referred to as school engagement. Disengagement, e.g., not attending class, not completing assignments, can create severe impediments to learning. Appended are: 1. technical notes, 2. standard errors tables, 3. other statistical tables, and 4. variables used in this report. Contains 148 endnotes and 19 tables.

For too many students, mathematics consists of facts in a vacuum to be memorized because the instructor says so and to be forgotten when the course of study is completed. In this all too common scenario, young learners often miss the chance to develop skills, specifically reasoning skills, that can serve them for a lifetime. The elegant pages of *Teaching Mathematical Reasoning* in secondary school classrooms propose a more positive solution by presenting a reasoning and discussion based approach to teaching mathematics, emphasizing the connections between ideas or why math works. The teachers whose work forms the basis of the book create a powerful record of methods, interactions, and decisions, including dealing with challenges and impasses involving this elusive topic. And because this approach shifts the locus of authority from the instructor to mathematics itself, students gain a system of knowledge that they can apply not only to discrete tasks relating to numbers but also to the larger world of people and the humanities. A sampling of the topics covered: whole class discussion methods for teaching mathematics reasoning, learning mathematical reasoning through tasks, teaching mathematics using the five strands, classroom strategies for promoting mathematical reasoning, maximizing student contributions in the classroom, overcoming student resistance to

mathematical conversations teaching mathematical reasoning in secondary school classrooms makes a wealth of cutting edge strategies available to mathematics teachers and teacher educators this book is an invaluable resource for researchers in mathematics and curriculum reform and of great interest to teacher educators and teachers
