data usually comes in a plethora of formats and dimensions rendering the exploration and information extraction processes challenging thus being able to perform exploratory analyses in the data with the intent of having an immediate glimpse on some of the data properties is becoming crucial exploratory analyses should be simple enough to avoid complicate declarative languages such as sql and mechanisms and at the same time retain the flexibility and expressiveness of such languages recently we have witnessed a rediscovery of the so called example based methods in which the user or the analyst circumvents query languages by using examples as input an example is a representative of the intended results or in other words an item from the result set example based methods exploit inherent characteristics of the data to infer the results that the user has in mind but may not be able to easily express they can be useful in cases where a user is looking for information in an unfamiliar dataset when the task is particularly challenging like finding duplicate items or simply when they are exploring the data in this book we present an excursus over the main methods for exploratory analysis with a particular focus on example based methods we show how that different data types require different techniques and present algorithms that are specifically designed for relational textual and graph data the book presents also the challenges and the new frontiers of machine learning in online settings which recently attracted the attention of the database community the lecture concludes with a vision for further research and applications in this area

machine learning deals with the issue of how to build computer programs that improve their performance at some tasks through experience machine learning algorithms have proven to be of great practical value in a variety of application domains not surprisingly the field of software engineering turns out to be a fertile ground where many software development and maintenance tasks could be formulated as learning problems and approached in terms of learning algorithms this book deals with the subject of machine learning applications in software engineering it provides

an overview of machine learning summarizes the state of the practice in this niche area gives a classification of the existing work and offers some application guidelines also included in the book is a collection of previously published papers in this research area

this volume contains the proceedings of the european conference on machine learning ecml 93 continuing the tradition of the five earlier ewsls european working sessions on learning the aim of these conferences is to provide a platform for presenting the latest results in the area of machine learning the ecml 93 programme included invited talks selected papers and the presentation of ongoing work in poster sessions the programme was completed by several workshops on specific topics the volume contains papers related to all these activities the first chapter of the proceedings contains two invited papers one by ross quinlan and one by stephen muggleton on inductive logic programming the second chapter contains 18 scientific papers accepted for the main sessions of the conference the third chapter contains 18 shorter position papers the final chapter includes three overview papers related to the ecml 93 workshops

in recent years ai has been experiencing a deep internal debate on the appropriateness of the symbolic based paradigm and all of its consequences while various symbolic representation schemes as well as their integration have been proposed their limitations have continuously pushed researchers for improved versions or entirely new ones new viewpoints such as the complex dynamic based approach with neural nets can be regarded simply as new problem solving techniques with specific properties under this perspective what seems to be important is the ability to combine heterogeneous representation and problem solving techniques research on heterogeneous intelligent systems goes hand in hand with research on specific problem solving methods and paradigms therefore representing their conceptual and practical glueing element the papers contained in this proceedings are just one instance of such awareness activity in the international scientific community
