david papineau presents a controversial view of human reason portraying it as a normal part of the natural world and drawing on the empirical sciences to illuminate its workings in these six interconnected essays he offers a fresh approach to some long standing problems papineau rejects the contemporary orthodoxy that genuine thought hinges on some species of non natural normativity he explores the evolutionary histories of theoretical and practical rationality indicating ways in which capacities underlying human reasoning have been selected for their biological advantages he then looks at the connection between decision and probability explaining how good decisions need to be informed by causal as well as probabilistic facts finally he defends theradical view that a satisfactory understanding of decision making is only possible within a specific

interpretation of quantum mechanics by placing the subject in its scientific context papineau shows how human rationality plays an explicable role in the functioning of the natural world
