what are the fundamental qualities of an exemplary executive do you possess them it s often easy for executives or aspiring executives

to know what they need to do but it is much harder to actually do what you know you're supposed to do. Executive effectiveness or success in any endeavor or profession that requires a developed set of skills is built upon well-developed fundamentals and serious repetitions of those fundamentals to create unconscious competence. Leadership is no different: if you want to be good at something, you've got to earn it. Executive Fundamentals is an important, elegant guide designed to organize executive fundamentals into a general roadmap so that leaders at all levels can guide their development and take command of what they know they need to do at any point in their careers. Purposefully brief, the book intersperses succinct and powerful quotes and information from stellar business books as counterpoints to the knowledge and experience presented by Fischer and Shin. The authors include worksheets developed from their years in business that will make it as easy for you to put their advice into action as practicing your favorite golf swing or tennis stroke. Nick Fischer is a seasoned executive with broad industry experience spanning consumer packaged goods, banking, retail, and business services. Nick has focused a significant portion of his career on redefining the traditional role of corporate finance as a true strategic partner at the center of business performance optimization, a topic he regularly addresses through various publications and public speaking engagements. Dan Shin is a data-driven executive with a background crossing multiple industries, including retail, pharmaceuticals, and business services. Dan's executive management style and his ability to simplify analytics workflow to deploy actionable insights and recommendations has provided continued success in multiple contexts, ranging from start-ups to middle market and Fortune 500 companies.

This book constitutes the refereed proceedings of the 4th International Conference on Computational Modeling of Objects Presented in Images (COMPIMAGE 2014) held in Pittsburgh, PA, USA, in September 2014. The 29 revised full papers presented together with 10 short papers and 6 keynote talks were carefully reviewed and selected from 54 submissions. The papers cover the following topics: medical treatment imaging and analysis, image registration, denoising and feature identification, image segmentation, shape analysis, meshing and graphs, medical image processing and simulations, image recognition, reconstruction and predictive modeling, image-based modeling and simulations, and computer vision and data-driven investigations.
