it has long been assumed that england lay outside the western european tradition of castle building until after the norman conquest of 1066 it is now becoming apparent that anglo saxon lords had been constructing free standing towers at their residences all across england over the course of the tenth and eleventh centuries initially these towers were exclusively of timber and quite modest in their scale although only a handful are known from archaeological excavation there followed the so called tower nave churches towers with only a tiny chapel located inside which appear to have had a dual function as buildings of elite worship and symbols of secular power and authority for the first time this book gathers together the evidence for these remarkable buildings many of which still stand incorporated into the fabric of norman and later parish churches and castles it traces their origin in monasteries where kings and bishops drew upon continental european practice to construct centrally planned tower like chapels for private worship and burial and to mark gates and important entrances particularly within the context of the tenth century monastic reform adopted by the secular aristocracy to adorn their own manorial sites it argues that many of the known examples would have provided strategic advantage as watchtowers over roads rivers and beacon systems and have acted as focal points for the mustering of troops the tower nave form persisted into early norman england where it may have influenced a variety of high status building types such as episcopal chapels and monastic belltowers and even the keeps and gatehouses of the earliest stone castles the aim of this book is to finally establish the tower nave as an important anglo saxon building type and to explore the social architectural and landscape contexts in which they operated
