computer architecture a quantitative approach sixth edition has been considered essential reading by instructors students and practitioners of computer design for over 20 years the sixth edition of this classic textbook from hennessy and patterson winners of the 2017 acm a m turing award recognizing contributions of lasting and major technical importance to the computing field is fully revised with the latest developments in processor and system architecture the text now features examples from the risc v risc five instruction set architecture a modern risc instruction set developed and designed to be a free and openly adoptable standard it also includes a new chapter on domain specific architectures and an updated chapter on warehouse scale computing that features the first public information on google s newest wsc true to its original mission of demystifying computer architecture this edition continues the longstanding tradition of focusing on areas where the most exciting computing innovation is happening while always keeping an emphasis on good engineering design includes a new chapter on domain specific architectures explaining how they are the only path forward for improved performance and energy efficiency given the end of moore s law and dennard scaling features the first publication of several dsas from industry features extensive updates to the chapter on warehouse scale computing with the first public information on the newest google wsc offers updates to other chapters including new material dealing with the use of stacked dram data on the performance of new nvidia pascal gpu vs new avx 512 intel skylake cpu and extensive additions to content covering multicore architecture and organization includes putting it all together sections near the end of every chapter providing real world technology examples that demonstrate the principles covered in each chapter includes review appendices in the printed text and additional reference appendices available online includes updated and improved case studies and

exercised acm named john l hennessy and david a patterson recipients of the 2017 acm a m turing award for pioneering a systematic quantitative approach to the design and evaluation of computer architectures with enduring impact on the microprocessor industry

the architecture of computer hardware systems software and networking is designed help students majoring in information technology it and information systems is understand the structure and operation of computers and computer based devices requiring only basic computer skills this accessible textbook introduces the basic principles of system architecture and explores current technological practices and trends using clear easy to understand language throughout the text numerous relatable examples subject specific illustrations and in depth case studies reinforce key learning points and show students how important concepts are applied in the real world this fully updated sixth edition features a wealth of new and revised content that reflects today s technological landscape organized into five parts the book first explains the role of the computer in information systems and provides an overview of its components subsequent sections discuss the representation of data in the computer hardware architecture and operational concepts the basics of computer networking system software and operating systems and various interconnected systems and components students are introduced to the material using ideas already familiar to them allowing them to gradually build upon what they have learned without being overwhelmed and develop a deeper knowledge of computer architecture

in this volume the author analyzes 400 architectural books and articles published over the past 150 years to reveal changing societal preferences in architecture and to measure the reputations of individual architects the text includes a ranked list of the 100 most famous architects

providing a critique of the concepts attached to the representation of urban space this ground breaking book formulates a new theory of space which understands the dynamic interrelations between physical and social spaces while tracing the wider urban context it offers a new tool to approach the reading of these interrelations through reflexive reading strategies that identify singular reading fragments of the different spaces through multiple reader time space relations the

strategies proposed in the volume seek to develop an integrative reading of urban space through recognition of the singular influenced by discourse institution etc and temporal influenced by reading perspective in space and time thereby providing a relational perspective that goes beyond the paradox of place in between social and physical space identifying each in terms of relationships oscillating between the conceptual the physical and social content and the context in conclusion the book suggests that space place can be read through sequential fragments of people place context mind and author reader operating at different scales between conceptual space and reality the sequential reading helps the recognition of multiplicity and the dynamics of place as a transformational process without hierarchy or classification
