this professional treatise on engineering graphics emphasizes engineering geometry as the theoretical foundation for communication of design ideas with real world structures and products it considers each theoretical notion of engineering geometry as a complex solution of direct and inverse problems of descriptive geometry and each solution of basic engineering problems presented is accompanied by construction of biunique two and three dimension models of geometrical images the book explains the universal structure of formal algorithms of the solutions of positional metric and axonometric problems as well as the solutions of problems of construction in developing a curvilinear surface the book further characterizes and explains the added laws of projective connections to facilitate construction of geometrical images in any of eight

octants laws of projective connections allow constructing the complex drawing of a geometrical image in the american system of measurement and the european system of measurement without errors and mistakes the arrangement of projections of a geometrical image on the complex drawing corresponds to an arrangement of views of a product in the projective drawing for the european system of measurement the volume is ideal for engineers working on a range of design projects as well as for students of civil structural and industrial engineering and engineering design
