for students of archaeology

the present volume reflects the work of the joint expedition of cairo university and brown university to record and publish the tombs uncovered on behalf of cairo university by prof abdel moneim abu bakr from 1949 through 1953 but never published the loss of field records and lack of a map of the site meant that new salvage excavation had to be undertaken a total of six seasons from 2000 2006 resulted in the clearing remapping and recording of the monuments in the cemetery abu bakr cemetery is of particular interest because the majority of mastaba tombs belong to relatively low ranking individuals thus they have the potential to shed light on the social status of egypt's working classes

forensic reconstruction is intended for use by students and practitioners alike there are few books that concentrate on the process of crime scene reconstruction that also include some of the basic principles of forensic investigation these principles are examined in the first few chapters of the book and include the use of logic in examination and the admission of reconstruction evidence in american courts after a look at the basics this text looks at application of these standards in various applications of the reconstruction process among the applications are those that may be found in other sources such as shooting reconstruction dna pathology and bloodstain pattern analysis also included are more recent developments and unique areas such as profiling genetic genealogy and computational reconstruction as applied to airplane crashes each chapter is written by a recognized expert in the field which adds a depth of understanding and case highlights not found in other texts

drawing from a variety of sites throughout mesoamerica this volume presents a collection of osteobiographies which analyze skeletons and their surroundings alongside historical archaeological ethnographic and other contextual data to better understand the life experiences of individuals

the biology of prehistoric and early people is studied through analysis of hard tissue this text provides comprehensive information on a variety of advanced methods of skeletal analysis employing developments made in the 1990s

the human skeletal anatomy laboratory manual and workbook has been designed to help students who are enrolled in courses dedicated to this topic it is the product of many years of designing and instructing a human skeletal biology course for undergraduate students the key to this manual is flexibility instructors may utilize as much or as little of the manual as they see fit it is largely based on the regional approach to anatomy however the first section of the manual begins with a survey of the microscopic and macroscopic structure of bone after grounding the student in the basics of bone structure the manual then turns to the gross morphological anatomy of skeletal elements the axial skeleton is dealt with first then the appendicular skeleton the manual

is designed to cover material in an incremental fashion specifically the anatomy of less complicated bones such as the ribs sternum and hyoid are discussed prior to other axial bones in order to acquaint students with how to handle real bone material in the laboratory each successive laboratory session demands more from the student in both the level of understanding and expectations in assigned laboratory exercises each laboratory session begins with an introduction in order to familiarize the student with the areas to be studied subsequently the laboratory session has a stated purpose with clear instructions of expectations and learning objectives important terms are clearly indicated in boxes to stress to students that these must be understood this is then followed by a clear laboratory procedure for the student to follow this usually involves the identification of particular features of assigning specific tasks as identified in the various exercises finally as a means of stressing the applicability of what has been learned in the laboratory exercise the student will be requested to generate an evaluation of some aspect of the anatomy such as using a method for determining age at death from assigned specimens the student is then required to interpret this information and produce for the next class or session a laboratory research report guidelines for these reports are contained within this manual diagrams photographs have been provided for students to label these diagrams are meant to be a study guide instructors may wish to add anatomical features or de emphasize certain features accordingly

the author presents a guide to interpreting human remains the text covers why to study human remains from archaeological sites ethical concerns and human remains and the disposal and preservation of the dead then it delves into actual practice describing excavation processing conservation and curation the core chapters focus on recording and analyzing data considering in turn basic information palaeopathology and calling out the hard sciences a final chapter ponders the future of the dead

a two volume reference set that reflects the fundamental concepts and principles identified by the national committee on science education standards entries are arranged by topic or theme and cover concepts theories sub disciplines biographies common methods and techniques relevant to modern science

a book that clarifies the emerging picture of northwestern plains prehistory and early history as told by human bones in skeletal and burial records that span thousands of years and a wide geographic expanse providing important evidence of human existence in this vast region of north america
