contemporary television has been marked by such exceptional programming that it is now common to hear claims that tv has finally become an art in appreciating the art of television nannicelli contends that televisual art is not a recent development but has in fact existed for a long time yet despite the flourishing of two relevant academic subfields the philosophy of film and television aesthetics there is little scholarship on television in general as an art form this book aims to provide scholars active in television aesthetics with a critical overview of the relevant philosophical literature while also giving philosophers of film a particular account of the art of television that will hopefully spur further interest and debate it offers the first sustained theoretical examination of what is involved in appreciating television as an art and how this bears on the practical business of television scholars critics students and fans namely the comprehension interpretation and evaluation of specific televisual artworks

the book presents a collection of 10 articles published in a special issue entitled oral inflammations and systemic diseases in the international journal of molecular sciences issn 1422 0067 in the section molecular pathology diagnostics and therapeutics the oral inflammations that are covered in this issue consist of dental caries periodontitis and gingivitis with a preponderance of periodontitis periodontitis is clearly a bacterial disease however it is not an infectious disease in the classical sense because it results from complex interactions between the commensal microbiota host susceptibility and environmental factors such as diet and smoking the human mouth contains one of the most diverse microbiomes in the human body comprising viruses fungi protozoa archaea and bacteria the peer reviewed articles of the book consist of original and review papers focused on the question of how exposure of the mouth to specific oral microbiota impacts systemic diseases such as neuroinflammation atherosclerosis diabetes and arthritis

a decade of technological advances and research on the human microbiome has re defined our understanding of biological systems and now offers diagnostic tools and new approaches to human health likewise marine ecosystems are driven by their microbiome the ensemble of microscopic organisms that inhabit the water column sediments and aquatic organisms and regulate most fluxes of energy and matter while the human microbiome is composed principally of bacteria the marine microbiome has a much broader ensemble of microscopic organisms with sizes spanning from viruses of a few tens of nanometres to metazoans of several centimetres advances in high throughput imaging and sequencing are emerging in aquatic science providing important insights into ecosystem structure and functions and contributing to develop new indicators of ecosystem health and potential hazards to living resources and humans a number of research exploration and monitoring programs such as the tara oceans global expedition and the marine biological observing network mbon and the rising popularity of environmental dna edna already led to a wealth of data however the wide range of methodologies used in this early exploration phase poses a challenge to integrative studies prompting community responses such as the genomic standards consortium this research topic will foster cross community exchange of standards and best practices it is an opportunity for the different communities working on marine microbiomes to discuss the advantages and the limitations of their sampling and analysis methods the collection of papers will constitute a knowledge base aimed at 1 addressing the integration of existing observations from heterogenous methods and data types and 2 working towards cross communities standards and best practices for future observations and experiments this research topic will publish comprehensive methodological papers that review a sufficiently large body of field or experimental work supporting meta data such as environmental context sampling materials sample treatments extraction and imaging yields must be provided and should preferably be uploaded to an online sample registry such as biosamples protocols and analytical methods should preferably be uploaded to an online repository such as protocols io we welcome contributions from communities working in different environments focus on marine systems but also interested in estuarine and freshwater systems coastal open ocean and deep sea regions benthic pelagic and aerosol environments we strongly encourage contributions from communities involved in networks of local observatories and long term monitoring programs regional basin scale surveys and global expeditions biodiscovery linked to economic sectors such as pharmaceuticals and bioengineering

environmental and health assessments linked to economic sectors such as aquaculture fisheries seabed mining wind farms and oil and gas

the book pays homage to and deepens the well known themes of on liberty by john stuart mill and harm to self by joel feinberg it explores topics such as the arguments for and against legal paternalism and antipaternalism the value of individual autonomy in support of legal antipaternalism the slippery slope argument and moral perfectionism in favor of paternalism but is the value of individual autonomy an unstoppable force is it an irresistible argumentative force is its lightness unbearable the central question debated by legal paternalists and antipaternalists is the extent to which individuals can legitimately make decisions about their own bodies and lives provided they do no harm to others in order to address that question the book presents expert analyses of highly controversial moral and legal issues regarding the legitimacy or illegitimacy of practices such as prostitution violent sadomasochistic behavior drug trafficking and drug consumption euthanasia assisted suicide extreme sports and voluntary slavery contracts pursuing a legal moral and philosophical approach based on the author s extensive research it makes valuable contributions to the fields of legal and moral ethics legal and moral philosophy and criminal law and doctrine

now in its ninety seventh year of publication this standard canadian reference source contains the most comprehensive and authoritative biographical information on notable living canadians those listed are carefully selected because of the positions they hold in canadian society or because of the contribution they have made to life in canada the volume is updated annually to ensure accuracy and 600 new entries are added each year to keep current with developing trends and issues in canadian society included are outstanding canadians from all walks of life politics media academia business sports and the arts from every area of human activity each entry details birth date and place education family career history memberships creative works honours and awards and full addresses indispensable to researchers students media business government and schools canadian who s who is an invaluable source of general knowledge

the interaction between plants minerals and microbes is a crucial complex network for plant growth and the ecosystem plants are central to this interaction and rely on minerals for essential macronutrients and micronutrients plants absorb these nutrients from the soil through their root system they interact with microbes by forming symbiotic relationships which improve plant growth nutrient uptake and disease resistance essential nutrients are obtained from minerals through weathering and promoted soil fertility plant roots absorb nutrients in ionic form however their availability depends on soil ph texture organic

matter content and microbial activity soil microorganisms play a crucial in improving plant growth and nutrient cycling they release nutrients by decomposing organic matter which the plant can absorb microbes such as mycorrhizal fungi nitrogen fixing bacteria and plant growth promoting rhizobacteria form symbiotic relationships with plants mycorrhizal fungi s association with plants extends their reach to water and nutrients in exchange for carbohydrates from plants symbiotic and free living nitrogen fixing bacteria convert atmospheric nitrogen into plant available form and promote soil fertility mineral solubilizing bacteria and fungi are involved in the solubilization of minerals and promote the availability of macronutrients and micronutrients for plant uptake these microbes encourage plant growth by producing phytohormones and promoting nutrient availability and their uptake efficiency microbes may act as biocontrol agents and suppress plant pathogens through competition antibiosis or inducing systemic resistance in plants they primed plant defense mechanisms against microbial pathogens making them more resistant to subsequent pathogen attacks these microbes are involved in the decomposition of organic matter improving aggregation of soil particles water infiltration and root penetration these mechanisms highlight the complex and dynamic interactions between plants minerals and microbes in terrestrial ecosystems shaping soil fertility and ecosystem functioning this research topic offers a platform for researchers to share their latest findings in plant mineral microbe interactions areas to be covered in this collection may include but are not limited to plant microbe interactions mineral microbe interactions nitrogen fixing bacteria mycorrhizal associations plant growth promoting rhizobacteria disease suppression and plant defense organic matter decomposition and soil aggregation microbial influence on nutrient availability for plants nutrient cycling through plants minerals and microbes emerging techniques in plant mineral microbe interactions symbiotic relationships between plants and beneficial microbes plant microbe interactions in phytoremediation of contaminated soils plant microbe interactions through biofertilization and bioremediation microbial diversity and functional traits mediated by plants and minerals microbial communities and plant growth through soil mineralogy and geochemistry

throughout their life plants interact with all sorts of microbes some of these are detrimental and cause disease some interactions are mutually beneficial for both partners it is clear that most if not all of the interactions are regulated by highly complex checks and balances sustained by signalling and exchange of messengers and nutrients the interactions where both partners are alive for a significant part of their time together are called biotrophic in this e book we bring together 33 articles representing the current state of the art in research about diverse biotrophic plant microbe associations aimed at describing and understanding how these complex and ubiquitous partnerships work and ultimately support much of the land based biosphere
