eruptions of popular anger the economics of the arab spring and its aftermath sets out to answer three puzzles the arab inequality puzzle of civil uprisings in countries with low to moderate and stagnant economic inequality the unhappy development paradox of increasing dissatisfaction at a time of moderate to rapid development and the paradox of political violence in middle income countries the book s empirical investigation rules out high and rising inequality as a reason for the arab spring uprisings it shows that the real problem was the erosion in middle class incomes and the growing dissatisfaction with the quality of life the

shortage of formal sector jobs and corruption frustration was particularly high among the young educated middle class residents in urban areas the old social contract which had delivered development results in the past and under which arab governments provided public sector jobs and subsidized services in return for subdued voice was unsustainable and malfunctioning the public sector could no longer be the employer of choice but the private sector did not generate enough formal sector jobs because of distortions that constrained its growth and policies that offered advantages to a few firms with political connections limiting competition and private investment the breakdown in the social contract increased the premium on freedom and created impetus for political change this report shows that the arab spring revolutions and the subsequent spread of violence and civil wars in the post arab spring middle east and north africa region can be traced to the broken social contract institutional weaknesses and regional divisions in societies polarized along ethnic and sectarian lines the arab spring and its aftermath indicate the need for a new social contract under which governments promote private sector job creation design public services in a way that holds providers accountable to beneficiaries and promote inclusion and good governance
