in recent years the interplay between model theory and other branches of mathematics

has led to many deep and intriguing results in this the first book on the topic the theme is the interplay between model theory and the theory of modules the book is intended to be a self contained introduction to the subject and introduces the requisite model theory and module theory as it is needed dr prest develops the basic ideas concerning what can be said about modules using the information which may be expressed in a first order language later chapters discuss stability theoretic aspects of modules and structure and classification theorems over various types of rings and for certain classes of modules both algebraists and logicians will enjoy this account of an area in which algebra and model theory interact in a significant way the book includes numerous examples and exercises and consequently will make an ideal introduction for graduate students coming to this subject for the first time

online learning has become an important vehicle for teacher and student learning when well designed online environments can be very powerful in a way that is consistent with the goals of inquiry experimentation investigation reasoning and problem solving so learners can develop a deep understanding of a subject some subjects however are not well suited for this type of learning due to the need for small group collaborating and hands on problem solving the handbook of research on online pedagogical models for mathematics teacher education provides innovative insights into technology applications and tools used in teaching mathematics online and provides examples of online learning environments and platforms that are suitable for meeting math education goals of inquiry investigation reasoning and problem solving the content within this publication examines access to education professional development and web based learning it is designed for teachers curriculum developers instructional designers educational software developers it consultants higher education faculty policymakers administrators researchers academicians and students

the idea of writing this book came roughly at the time of publication of my graduate text lectures on modules and rings springer gtm vol 189 1999 since that time teaching obligations and intermittent intervention of other projects caused prolonged delays in the work on this volume only a lucky break in my schedule in 2006 enabled me to put the finishing touches on the completion of this long overdue book this book is intended to serve a dual purpose first it is designed as a problem book for lectures as such it contains the statements and full solutions of the many exercises that appeared in lectures second this book is also offered as a reference and repository for general information in the theory of modules and rings that may be hard to find in the standard textbooks in the field as a companion volume to lectures this work covers the same math ematical material as its parent work namely the part of ring theory that makes substantial use of the notion of modules the two books thus share the same table of contents with the first half treating projective injective and flat modules homological and uniform dimensions and the second half dealing with noncommutative localizations and goldie s theorems maximal rings of quotients frobenius and quasi

textbook writing must be one of the cruelest of self inflicted tortures carl faith math reviews 54 5281 so why didn t i heed the warning of a wise colleague especially one who is a great expert in the subject of modules and rings the answer is simple i did not learn about it until it was too late my writing project in ring theory started in 1983 after i taught a year long course in the subject at berkeley my original plan was to write up my lectures and publish them as a graduate text in a couple of years my hopes of carrying out this plan on schedule were however quickly dashed as i began to realize how much material was at hand and how little time i had at my disposal as the years went by i added further material to my notes and used them to teach different versions of the course eventually i came to the realization that writing a single volume would not fully accomplish my original goal of giving a comprehensive treatment of basic ring theory at the suggestion of ulrike schmickler hirzebruch then mathematics editor of springer verlag i completed the first part of my project and published the write up in 1991 as a first course in noncommutative rings gtm 131 hereafter referred to as first course or simply fc

because traditional ring theory places restrictive hypotheses on all submodules of a module its results apply only to small classes of already well understood examples often modules with infinite goldie dimension have finite type dimension making them amenable to use with type dimension but not goldie dimension by working with natural classes
