the study of the evolution of church structure and order has been subject to considerable research and debate often with theological presuppositions determining the direction taken in this highly original work benkt holmberg separates historical groundwork from theological analysis by reviewing the issues from a sociological point of view what emerges is an unusually lucid study of the network of power relationships which can be traced in the decades of st paul s ministry the principal actors and situations in the pauline epistles suggest what the organizational and leadership realities of the times were like and how paul his co workers and his churches related to one another in part one holmberg provides a historical description of the distribution of power at three levels in the primitive church that between the church in jerusalem and the apostle paul at the regional level where paul operates in local churches personally through co workers and by letters and at the local intrachurch level in part two holmberg develops a sociological analysis of the shape and location of authority in the church he examines the new testament literature for evidence and then interprets it in terms of categories derived from modern theoretical sociology and in particular from max weber s sociology of authority holmberg describes the nature of authority in the early church and concludes that a charismatic authority was continuously reinstitutionalized through interaction of persons institutions and social forces within the church this persuasive and provocative study combines serious new testament interpretation with sociological analysis of a crucial issue in earliest christianity it advances the case of sociological exegesis by offering a model for further investigations of the entire structure of church leadership and authority in emergent christianity

crystallography is the major method of determining structures of biological macromolecules yet crystallization techniques are still regarded as difficult to perform this new edition of crystallization of nucleic acids and proteins a practical approach continues in the vein of the first edition by providing a detailed and rational guide to producing crystals of proteins and nucleic acids of sufficient quantity and quality for diffraction studies it has been thoroughly updated to include all the major new techniques such as the uses of molecular biology in structural biology maximizing expression systems sequence modifications to enable crystallization and the introduction of anomalous scatterers diagnostic analysis of pre-nucleation and nucleation by spectroscopic methods and the two dimensional electron crystallography of soluble proteins on planar lipid films as well as an introduction to crystallogenesis the other topics covered are handling macromolecular solutions

experimental design seeding proceeding from solutions to crystals crystallization in gels crystallization of nucleic acid complexes and membrane proteins soaking techniques preliminary characterization of crystals in order to tell whether they are suitable for diffraction studies as with all practical approach books the protocols have been written by experienced researchers and are tried and tested methods the underlying theory is brought together with the laboratory protocols to provide researchers with the conceptual and methodological tools necessary to exploit these powerful techniques crystallization of nucleic acids and proteins a practical approach 2e will be an invaluable manual of practical crystallization methods to researchers in molecular biology crystallography protein engineering and biological chemistry
