laboratory manual for principles of general chemistry 11th edition covers two semesters of a general chemistry laboratory program the material focuses on the lab experiences that reinforce the concepts that not all experimental conclusions are the same and

depend on identifying an appropriate experimental procedure selecting the proper apparatus employing the proper techniques systematically analyzing and interpreting the data and minimizing inherent variables as a result of good data a scientific and analytical conclusion is made which may or may not be right but is certainly consistent with the data experiments write textbooks textbooks don't write experiments a student's scientific literacy grows when experiences and observations associated with the scientific method are encountered further experimentation provides additional cause effect observations leading to an even better understanding of the experiment the 11th edition's experiments are informative and challenging while offering a solid foundation for technique safety and experimental procedure the reporting and analysis of the data and the pre and post lab questions focus on the intuitiveness of the experiment the experiments may accompany any general chemistry textbook and are compiled at the beginning of each curricular unit an additional notes column is included in each experiment's report sheet to provide a space for recording observations and data during the experiment continued emphasis on handling data is supported by the data analysis section

minimizes the amount of chemicals used in the lab and resultant chemical waste introduces new experiments designed to reduce exposure to toxic materials lab costs and environmental pollution covers basic chemical concepts as well as spectroscopy and solution physical and inorganic chemistry also presents several viable macroscale versions of experiments includes a glossary of terms as well as appendices of scientific tables and information

this established manual focuses on using non hazardous materials to teach the experimental nature of general chemistry experiments are written to address students of various academic backgrounds and differing interests and abilities in chemistry while most experiments can be conducted in a single three hour period some have been designed to be completed over an extended time to illustrate that chemical systems do not work at an arbitrary schedule suggestions are provided for combining experiments of shorter length and similar pedagogy
