this thesis explores the avenues for the ecosystem approach to management in the baltic sea region this region is one of the most contaminated water bodies in the world although the first regional seas convention was created here and the region has a long history of cooperation and environmental protection the current environmental governance arrangements are examined with specific focus on governance structures cross sectoral integration and ecological boundaries the ecosystem approach to management as both a tool and vision of holistic management of natural resources is traced through the evolution of environmental governance as well as its manifestation in contemporary environmental policies in the region it is found that the major eu directives as well as helcom policies promote the ecosystem approach and that its presence has increased in recent years it is now the major guiding principle in european marine governance however the governance structures impede implementation in different ways the environmental problem areas in the region all require different governance arrangements thus obstructing a holistic approach the environmental problems per se also affect each other necessitating far reaching sectoral integration and cross border cooperation which at present is the major obstacle regarding implementation the contemporary trends combining solid regionalisation through helcom with increased europeanisation and macro regionalisation by different eu initiatives offer some promise but the cross sectoral impediments must be resolved if the ecosystem approach is to become a practical approach and not just a policy principle

for many it was more than a publication it was a way of life the whole earth catalog billed itself as access to tools and it grew from a bay area blip to a national phenomenon catering to hippies do it yourselfers and anyone interested in self sufficiency independent of mainstream america now known as living off the grid in recovering the history of the catalog s unique brand of environmentalism historian kirk recounts how stewart brand and the point foundation promoted a philosophy of pragmatic environmentalism that celebrated technological

achievement human ingenuity and sustainable living kirk shows us that whole earth was more than a mere counterculture fad at a time when many of these ideas were seen as heretical to a predominantly wilderness based movement it became a critical forum for environmental alternatives and a model for how complicated ecological ideas could be presented in a hopeful and even humorous way from publisher description

this book brings together over thirty leading contributions to environmental ethics from pioneering papers to recent work at the cutting edge of thought in this field the introduction links together these articles and also appraises their strengths and weaknesses and presents a distinctive overview of the subject
