in the last decades the public concern on the pesticide residues content in foods have been steadily rising the global development of food trade implies that aliments from everywhere in the world can reach the consumer s table therefore the identification of agricultural practices that employ different pesticides combinations and application rates to protect produce must be characterized as they left residues that could be noxious to human health however the possible number of pesticides and its metabolites of toxicological relevance to be found in a specific commodity is almost 1500 and the time needed to analyze them one by one makes this analytical strategy a unrealistic task to overcome this problem the concept of multi residue methods mrm for the analysis of pesticide traces have been developed the advent of new and highly sensitive instrumentation based in hyphenatedchromatographic systems to coupled mass analyzers xc ms ms or msn permitted simultaneously the identification and the determination of up to hundreds of pesticide residues in a single chromatographic run multiresidue methods for the analysis of pesticide residues in food presents the analytical procedures developed in the literature as well as those currently employed in the most advanced laboratories that perform routinely pesticide residue analysis in foods in addition to these points the regulations guidelines and recommendations from the most important regulatory agencies of the world on the topic will be commented and contrasted

master s thesis from the year 2014 in the subject environmental sciences grade excellent university of alexandria faculty of engineering production department course quality improvement tools and techniques being used in the analysis of an environmental problem language english abstract environmental quality is a prime concern to sustain the development of egypt solid wastes generated from human settlements are of the major environmental issues that concern and challenge egypt today swm is a crucial public service issue affecting both environment and health swm in egypt have always been and will continue to be one of the most pressing challenges facing the egyptian authorities for the coming decades unless appropriate solutions are derived the intention of this search is to implement quality improvement techniques in environmental engineering field to analyze the egyptian waste management problem and find applicable solutions according to the current situation givens the main focus is on municipal solid wastes excluding hazardous wastes from it swm problem in egypt can be summarized as the absence of a regular waste collection service waste is dumped in open spaces on access roads which are invaded by animals and waste pickers so wastes are scattered and serve as breeding grounds for disease vectors and with the leachate from decomposing garbage nearby water sources and soil which results in food contamination all this have serious environmental consequences alexandria the second capital of egypt is taken as practical case study

of this search the field of solid waste management is as old as human beings age since that waste is a product that is commonly developed due to human living this sector has been of such concern for all cultures all along the history because of its significant effects on both the human health and his surrounding environment the effects on health appears in terms of disease spread like cholera and plague that were really developed due to poor means of handling solid wastes at this time while the significant effects that could affect the environment appear in terms of land degradation and soil contamination but a huge gap has occurred in the development and improvement of this field between developed and developing countries along time in developing countries like egypt the situation is deteriorated in terms of inadequate waste collection service resulting in poor waste collection coverage efficiency that led to waste garbage spread on the access roads of the cities
