features the site will have creating a schedule managing changes to the design as the project progresses and ultimately declaring the project complete once the website is launched and approved

Howto Practice creating simple project charters and work breakdown structures WBS Use project management software even free versions to simulate planning and execution

Scope Management Defining what work is included and excluded from the project

Example For our website project scope management ensures we only build the features agreed upon in the project charter avoiding scope creep adding extra features not initially planned

Howto Practice creating scope statements and using techniques like WBS to define and manage project scope

Schedule Management Creating and managing the project timeline

Example Determining how long each task will take to build the website and creating a Gantt chart to visualize the project schedule

Howto Learn to use Gantt charts and critical path analysis

Practice creating simple project schedules using online tools or spreadsheets

Cost Management Planning estimating budgeting and controlling project costs

Example Estimating the cost of development design and testing for the website project and creating a budget to manage expenses

Howto Learn different cost estimation techniques analogous parametric bottomup and practice creating project budgets

Quality Management Ensuring the project meets defined quality standards

Example Defining quality standards for the website eg page load speed user experience and implementing quality control checks throughout the project

Howto Understand quality management tools like control charts and Pareto diagrams

Resource Management Acquiring and managing resources people equipment materials

Example Hiring developers designers and testers for the website project and ensuring they have the necessary tools and equipment

Howto Practice resource leveling and allocation techniques

Communications Management Planning and executing effective communication throughout the project

3 Example Regular meetings with the development team client updates and documentation of decisions and progress

Howto Learn communication planning techniques and different communication methods

Risk Management Identifying assessing and responding to potential risks

Example Identifying potential risks for the website project eg delays budget overruns technical issues and developing contingency plans

Howto Learn risk identification and assessment techniques and practice creating risk response plans

Procurement Management Planning and managing the acquisition of goods and services from external sources

Example If the website project requires specialized software procurement management handles acquiring

that software Howto Understand different procurement methods eg fixedprice
 costreimbursable and contract types Stakeholder Management Identifying engaging and
 managing stakeholders throughout the project Example Keeping the client developers
 designers and testers informed and engaged throughout the website project Howto Learn
 stakeholder identification and analysis techniques Visual Insert a table summarizing the key
 knowledge areas with brief descriptions and relevant techniques for each Tips for Success
