this is a collection of essays focused on problems concerning the philosophy of technology the concept of nature the relationships between policy and economic development on the one hand and technological development on the other hand with respect to philosophical principles historical and cultural background both in western and chinese civilization

only recently has the phenomenon of technology become an object of interest for philosophers the first attempts at a philosophy of technology date back scarcely a hundred years a span of time extremely short when compared with the antiquity of philosophical reflections on nature science and society over that hundred year span speculative critical and empiricist approaches of various sorts have been put forward nevertheless even now there remains a broad gap between the importance of technology in the real world and the sparse number of philosophical works dedicated to the understanding of modern technology as a result of the complex structure of modern technology it can be dealt with in very different ways these range from metaphysical exposition to efforts aimed at political consensus quite naturally within such a broad range certain national accents can be discovered they are shaped by a common language accepted philosophical traditions and concrete problems requiring consideration even so the worldwide impact of technology its penetration into all spheres of individual social and cultural life together with the urgency of the problems raised in this context all these demand a joint philosophical discussion that transcends the barriers of language and cultural differences the papers printed here are intended to exemplify such an effort at culture transcending philosophical discussion

soil and crop sensing is a fundamental component and the first important step in precision agriculture unless the level of soil and crop variability is known appropriate management decisions cannot be made and implemented in the last few decades various ground based sensors have been developed to measure spatial variability in soil properties and nutrients crop growth and yield and pest conditions remote sensing as an important data collection tool has been increasingly used to map soil and crop growth variability as spatial spectral and temporal resolutions of image data have improved significantly in recent years while identifying spatial variability of soil and crop growth within fields is an important first step towards precision management using that variability to formulate variable rate application plans of farming inputs such as fertilizers and pesticides is another essential step in precision agriculture the purpose of this book is to present the historical current and future developments of soil and crop sensing technologies with fundamentals and practical examples the first chapter gives an overview of soil and crop sensing technologies for precision crop production the next six chapters provide details on theories methods practical applications as well as challenges and future research needs for all aspects of soil and crop sensing the last two chapters show how soil and crop sensing technologies can be used for plant phenotyping and precision fertilization the chapters are written by some of the world's leading experts who have contributed significantly to the developments of precision agriculture technologies especially in the area of soil and crop sensing they use their knowledge experiences and successful stories to present informative and up to date information on relevant topics therefore this book is an invaluable addition to the literature and can be used as a reference by scientists engineers practitioners and college students for the dissemination and advancement of precision agriculture technologies for practical applications

grunden's analysis of this fundamental flaw in the japanese war effort seamlessly weaves together science technology and military history to provide an entirely unique look at a crucial but understudied aspect of world war ii comparing the science and weapons programs of all the major combatants he demonstrates that japan's failure was nearly inevitable given its paucity of strategic resources an inadequate industrial base the absence of effective centralized management to coordinate research military hostility toward civilian scientists and bitter interservice rivalries in the end japan could not overcome these obstacles and thus failed to make the transition to the kind of big science it needed to ward off its enemies and dominate the far east book jacket

in this paper we study how aggregate output responds to the arrival of a new general purpose technology gpt by looking at adjustment mechanisms that operate through labor markets we show that under a wide set of circumstances the arrival of a new gpt that raises long run output can trigger a recession in the short run furthermore we characterize features of the gpt that produce a cyclical adjustment path an initial recession occurs whenever a higher education level is required to operate the new gpt but a recession can also occur when the new gpt has lower educational requirements a cyclical adjustment path is more likely when inexperienced workers are less productive with the new technology and the faster productivity rises with experience in the new sector
