impaired performance induced by fatigue may compromise safety in commercial aviation given the direct role flight attendants play in passenger safety the u s congress ordered a comprehensive examination of fatigue in cabin crew including a field study of actual flight operations this report provides an overview of the field study results focusing on objective measures of sleep patterns and neurocognitive performance psychomotor vigilance test pvt over a 3 4 week period in 202 u s based flight attendants of all seniority levels working for network low cost and regional carriers embarking on domestic and international flight operations on average flight attendants slept 6 3 hr on days off and 5 7 hr on work days fell asleep 29 min after going to bed awoke four times per sleep episode and spent 77% of each episode actually sleeping after controlling for reserve status gender and age junior level flight attendants had the shortest sleep latencies on their days off those working international operations slept significantly less 4 9 hr vs 5 9 hr and less efficiently 75 vs 79% compared with their colleagues in domestic operations all flight attendants exhibited significant impairments during prework pvt tests when compared to their own optimum baseline performance across the workday regional flight attendants committed

fewer premature pvt responses junior level participants produced significantly higher post work reaction times and those working international flights produced better pre work reaction times but had a greater increase in lapses these objective data are consistent with other shift work research and echo subjective survey findings across the u s flight attendant community additional planned analyses of this dataset may identify the precise operational variables that contribute to fatigue in cabin crew report documentation page
