record of creation particularly his book is based on discoveries in geology which clearly indicate that there is something wrong with the generally accepted teachings on this science an intensely interesting non technical presentation of the doctrine of evolution and its application to bible truth

includes section review of recent geological literature

the second edition of this innovative book provides geo relevant chemistry in a highly accessible format the environmental geological and topical relevance has been enhanced providing the ideal text to explain the relevance of chemical fundamentals to geological and environmental processes

this historic book may have numerous typos and missing text purchasers can usually download a free scanned copy of the original book without typos from the publisher not indexed not illustrated 1913 edition excerpt chapter xiii scientific methods in part one of this book i tried to examine into the facts and methods which are commonly supposed to prove that there has been a succession of life on the globe we found that this life succession theory has not a single fact to support it that it is not the result of scientific research but wholly the product of an inventive imagination that no one kind of fossil has ever been proved or can be proved to be intrinsically older than another or than man himself and hence that a complete reconstruction of geological theory is imperatively demanded by our modern knowledge in short that ancient world whose ruins we now have as fossils was a unit and simply an older state of our present world all the important groups of living plants and animals have now been found as fossils and their classification does not represent a time value in the one case any more than in the other the geological series of fossils represents merely taxonomic relationships just as would a similar arrangement of the living species nothing more in part two the following additional facts have been brought out 1 the abnormal character of much of the fossiliferous deposits 2 a radical and world wide change of climate 3 the marked degeneration in passing from the fossil world to the modern one 4 the fact that the human race to say nothing of a vast number of living species of plants and animals has participated in some of the greatest of the geological changes we really know not how to limit the number or character of these changes these additional facts still further emphasize the unity or solidarity of that ancient world they show how all its parts are indissolubly bound together in a common fate and how sharply

chemical principles are fundamental to the earth sciences and geoscience students increasingly require a firm grasp of basic chemistry to succeed in their studies the enlarged third edition of this highly regarded textbook introduces the student to such geo relevant chemistry presented in the same lucid and accessible style as earlier editions but the new edition has been strengthened in its coverage of environmental geoscience and incorporates a new chapter introducing isotope geochemistry the book comprises three broad sections the first chapters 1 4 deals with the basic physical chemistry of geological processes the second chapters 5 8 introduces the wave mechanical view of the atom and explains the various types of chemical bonding that give earth materials their diverse and distinctive

properties the final chapters 9 11 survey the geologically relevant elements and isotopes and explain their formation and their abundances in the cosmos and the earth the book concludes with an extensive glossary of terms appendices cover basic maths explain basic solution chemistry and list the chemical elements and the symbols units and constants used in the book
