Understanding the Cloud: A Quick Refresher Before we jump into the questions, let's quickly recap the core concepts. Cloud computing is the on-demand availability of computer system resources, especially data storage, cloud storage, and computing power, without direct active management by the user. Think of it like this: instead of owning and maintaining your own servers and software, you rent them from a provider like Amazon Web Services (AWS), Microsoft Azure, or Google Cloud Platform (GCP). Image: A simple visual depicting cloud computing, perhaps a network diagram with a cloud symbol representing the provider and devices connecting to it.

Now let's tackle some multiple-choice questions.

1 Which of the following is NOT a core characteristic of cloud computing?
a On-demand self-service
b Broad network access

Answer: c Proprietary resource pooling

2 What type of cloud deployment model involves sharing resources among multiple organizations?
a Public Cloud
b Private Cloud
c Hybrid Cloud
d Community Cloud
Answer: d Community Cloud
Explanation: A community cloud is designed for a specific community of users, such as organizations within a particular industry. Public clouds are accessible to the general public, private clouds are exclusively for a single organization, and hybrid clouds combine elements of both.

3 Which cloud service model provides users with complete control over the operating system and applications?
a Software as a Service (SaaS)
b Platform as a Service (PaaS)
