design

we are no longer used to critically examining the meaning of design which maintains an unexplored dimension in terms of the power that can be exercised through the cyclic act of creation preservation and disruption this assumption induce us focus on the contrast between the visible side of the act that involves all its conceptual and practical manifestations and a hidden or dark side that deals with politics and power play but that however has an major influence in the process and its hierarchical dynamics this implies an order on the surface seems to be naturally stirred by the so called perceptions that reflect the preferences of overall public opinions however looking deeper all the production acts involves a carefully controlled disequilibrium influenced by social ecological economical and political interests the power flow in the act of design takes into consideration the paradoxical contradiction between its potentiality and its preservation of power

nowadays we are used to think of design in terms of quality and beauty of the tangible or intangible artefacts that are generated by an industrialised system considering objects graphic representations interfaces or services the main difference between craftsmanship and design stays in the replicability and scalability of the proposed solution measured against an existent market and its hierarchical dynamics this implies an order that on the surface seems to be naturally stirred by the so called taste or a series of trends that reflect the preferences of the overall public however looking closer all the design production involves a carefully controlled balance driven by economical political and social interests
