causal uncertainty is a wide spread phenomenon courts are often unable to determine whether a defendant s tortious conduct was a factual cause of a plaintiff s harm yet sometimes courts can determine the probability that the defendant caused the plaintiff s harm although often there is considerable variance in the probability estimate based on the available evidence the conventional way to cope with this uncertainty has been to apply the evidentiary rule of standard of proof the application of this all or nothing rule can lead to unfairness by absolving defendants who acted tortiously and may also create undesirable incentives that result in greater wrongful conduct and injustice to victims some courts have decided that this no liability outcome is undesirable they have adopted rules of proportional liability that compensate plaintiffs according to the probability that their harm was caused by the defendant s tortious conduct in 2005 the principles of european tort law petl made a breakthrough in this regard by embracing rules of proportional liability this project building on petl endeavours to make further inquiries into the desirable scope of proportional liability and to offer a more detailed view of its meaning implications and ramifications

justification as ignorance offers an original account of epistemic justification as both non factive and luminous vindicating core internalist intuitions without construing justification as an internal condition knowable by reflection alone sven rosenkranz conceives of justification in its doxastic and propositional varieties as a kind of epistemic possibility of knowing and of being in a position to know his account contrasts with recent alternative views that characterize justification in terms of the metaphysical possibility of knowing instead he develops a suitable non normal multi modal epistemic logic for knowledge and being in a position to know that respects the finding that these notions create hyperintensional contexts he also defends his conception of justification against well known anti luminosity arguments shows that the account allows for fruitful applications and principled solutions to the lottery and preface paradoxes and provides a metaphysics of justification and its varying degrees of strength that is compatible with core assumptions of the knowledge first approach and disjunctivist conceptions of mental states
