management and administrative processes within the construction industry have been

undergoing major changes in the last several decades these changes have involved significant adjustments in management science and management techniques brought about by the need for contemporary valid information with which to manage the construction process in short management in the construction industry is changing significantly change will continue at an accelerated pace at least through the next decade the responses required of construction industry management are now resulting in a movement away from an entrepreneurial management style to professional management techniques and procedures the compelling economic issues the issues forcing these changes are economic the rising costs of construction and of money are forcing the buyers of construction services to be more demanding their demands are for more construction economies more production and more productivity than at any time in the past nowhere has this been more evident than in the business roundtable on construction and in the response of the construction industry to it to be successfully responsive management in the construction industry will be required to use the best project management methods available for cost control schedule control and for financial and accounting controls but responsive professional management can survive and will flourish within this more demanding economic environment

excerpt from decision cpm a method for simultaneous planning scheduling and control of projects critical path analysis is commonly considered to be a technique for planning and scheduling of projects the planning phase is usually identified with the construction of the project graph during which time specific decisions are made on the method of performing jobs as well as their technological ordering at the same time standard times are assigned to these jobs at the completion of the planning stage it is possible using the conventional cpm calculations to schedule the starting time of each job in the project unless several different plans are evaluated in this way or unless the technique of job crashing is used

there is no interaction between the planning and the scheduling phase of the usual cpm analysis we shall show in this paper that if an overall optimum is to be obtained a much greater degree of interaction is essential and shall give methods for solving the more general problem thus if there are a number of competing methods of performing some of the jobs each method having a different cost a different time duration and different technological dependencies we shall include all these in the project graph rather than making the decisions in advance then in the scheduling phase we shall consider the effects of all alternate methods of performing a task on the total cost of completing the project and choose those alternatives which minimize this cost we may apply the same method to the control of projects being carried out thus decisions 1 previously optimal may be changed during the execution of the project due to certain jobs being delayed about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works this work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it this work was reproduced from the original artifact and remains as true to the original work as possible therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work this work is in the public domain in the united states of america and possibly other nations within the united states you may freely copy and distribute this work as no entity individual or

the topic of this book is known as dynamic scheduling and is used to refer to three dimensions of project management and scheduling the construction of a baseline schedule and the analysis of a project schedule s risk as preparation of the project control phase during project progress this dynamic scheduling point of view implicitly assumes that the usability of a project s baseline schedule is rather limited and only acts as a point of reference in the project life cycle consequently a project schedule should especially be considered as nothing more than a predictive model that can be used for resource efficiency calculations time and cost risk analyses project tracking and performance measurement and so on in this book the three dimensions of dynamic scheduling are highlighted in detail and are based on and inspired by a combination of academic research studies at ghent university ugent be in company trainings at vlerick leuven gent management school vlerick com and consultancy projects at or as or as be first the construction of a project baseline schedule is a central theme throughout the various chapters of the book and is discussed from a complexity point of view with and without the presence of project resources second the creation of an awareness of the weak parts in a baseline schedule is discussed at the end of the two baseline scheduling parts as schedule risk analysis techniques that can be applied on top of the baseline schedule third the baseline schedule and its risk analyses can be used as guidelines during the project control step where actual deviations can be corrected within the margins of the project s
