excerpt from decision cpm a method for simultaneous planning scheduling and control of projects critical path analysis is commonly considered to be a technique for planning and scheduling of projects the planning phase is usually identified with the construction of the project graph during which time specific decisions are made on the method of performing jobs as well as their technological ordering at the same time standard times are assigned to these jobs at the completion of the planning stage it is possible using the conventional cpm calculations to schedule the starting time of each job in the project unless several different plans are evaluated in this way or unless the technique of job crashing is used there is no interaction between the planning and the scheduling phase of the usual cpm analysis we shall show in this paper that if an overall optimum is to be obtained a much greater degree of interaction is essential and shall give methods for solving the more general problem thus if there are a number of competing methods of performing some of

the jobs each method having a different cost a different time duration and different technological dependencies we shall include all these in the project graph rather than making the decisions in advance then in the scheduling phase we shall consider the effects of all alternate methods of performing a task on the total cost of completing the project and choose those alternatives which minimize this cost we may apply the same method to the control of projects being carried out thus decisions previously optimal may be changed during the execution of the project due to certain jobs being delayed about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
