In this first book in a new trilogy created by new media genius Jordan Weisman, Nathan Richards is your typical teen, one of the smartest at his school and the son of two famous archeologists. But he fails at everything because he refuses to apply himself, never knowing his mother who died on an archeological dig in a Mayan tomb while giving birth to him. Nathan is shocked when on his thirteenth birthday he receives his birthright from the Mayan god Kukulcan; he is granted the ability to travel the frequencies and interact with the dead, including his mother. Now the fate of the human race rests with Nathan, who must play a game for the world's survival, all culminating with the end of the Mayan calendar on December 21, 2012. Now it is time for Nathan to use his newfound gifts, fulfill his potential, and save the world.

The international new math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century. It attracted the attention of local and international politicians, teachers, and of parents, and influenced the teaching and learning of mathematics at all levels, kindergarten to college graduate. In many nations, after garnering much initial support, it began to attract criticism. But as Bill Jacob and the late Jerry Becker show in Chapter 17, some of the effects became entrenched. This volume, edited by Professor Dirk De Bock of Belgium, provides an outstanding overview of the new math/modern mathematics movement.

chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations the first few chapters show how the initial leadership came from mathematicians in european nations and in the united states of america the background leaders in europe were caleb gattegno and members of a mysterious group of mainly french pure mathematicians who since the 1930s had published under the name of a fictitious nicolas bourbaki in the united states there emerged during the 1950s various attempts to improve u s mathematics curricula and teaching especially in secondary schools and colleges this side of the story climaxed in 1957 when the soviet union succeeded in launching sputnik the first satellite undoubtedly this is a landmark publication in education the foreword was written by professor bob moon one of a few other scholars to have written on the new math from an international perspective the final epilogue chapter by professor geert vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
