pediatric cardiology is celebrating in the 1990s the 50th anniversary of the beginnings of the age of therapy this informal history describes how the discipline grew from the era of

pathologic anatomy to the dawn of therapy the beginnings of closed heart surgery between 1939 and 1945 that dawn ushered in a remarkable half century of change and growth leading from clinicophysiologic correlations through the start of open heart surgery in the 1950s the text celebrates some of the achievements of this vivid and heroic age and describes how in the mid 1970s new surgical and medical approaches including prostaglandins and doppler echocardiography led to successful cardiac treatment in infancy the infant era interventional cardiology and the study of childhood arrhythmias began now in the 1990s a new era emphasising molecular biology and cardiac development is growing from the tools and concepts of the past the four eras have focused on pathologic anatomy clinicophysiologic correlations and surgery heart problems in infancy and now the developing heart in each era there have been advances in the four domains of pediatric cardiology the heart before birth the normal heart heart disease and defects and preventive cardiology growth in knowledge has been both episodic and dramatic yet not a picture of unalloyed achievement the later chapters discuss some of the problems beginning to be recognised in the new and current developmental era the pioneers of pediatric cardiology both men and women are more than eponyms for each used in new and original ways the tools and concepts available in their era the interaction of tools and concepts is a theme in this book just as the tool of the stethoscope was vital in delineating the clinical profile of ventricular septal defect and patent ductus the fluoroscope played a role in developing the concept of the blalock taussig shunt pioneers also include patients and their families and the book includes some discussion of what little is known of childhood and of the child with heart disease in the four different eras this is a brief overview of the growth of knowledge of children's hearts from before william harvey until our own time and includes references to histories of cardiac surgery and to collections of classic cardiac papers by its emphasis on the child as the central historic figure and on the interaction of tools and concepts in the growth of knowledge the text provides a celebratory approach to the 50th anniversary of modern pediatric cardiology

heart disease despite recent improvements continues to be the single most important cause of death and disability in the united states it is estimated that the direct cost of medical care for cardiovascular disease is 6 billion dollars per year data compiled by the national center for health statistics reveal a dramatic decline in deaths from cardiovascular disease in the united states greater than 20 since 1968 this phenomenon has been the subject of in depth study it is clear that the decline is real and not a statistical artifact the decrease in mortality has been noted in all sections of the country though the onset and rate of decline varies in different regions of the country both primary prevention through changes in risk factors and basic and applied research leading to earlier recognition and improved treatment have contributed to the decline they do not fully explain the decline

further research is needed to clarify this issue clinical cardiologists have been exposed to a veritable explosion of new knowledge of mechanisms of cardiovascular disease development of new improved non invasive diagnostic techniques and the pharmacodynamics of agents affecting the cardiovascular system this new knowledge results from contributions made by individuals from diverse disciplines including cellular and molecular biologists geneticists hematologists cardiologists and cardiovascular surgeons

in the second chapter i present data showing that the precardiac mesoderm migration defect seen in mil mutant zebrafish embryos is due to a defect in the morphogenesis of the anterior endoderm a tissue known to be required for migration of the precardiac mesoderm in zebrafish furthermore i show that these endodermal defects cause craniofacial development defects in mil mutants
