employed during the major airplane checks to assess structural damage these techniques are enhanced with in situ sensing techniques that can continuously monitor aircraft structures and report on their health the move to condition based assessment of maintenance needs to be balanced by the assurance that safety is not compromised that initial cost of new equipment is amortized by the savings and that regulatory authorities are on board with any modifications to the planned maintenance schedule the trend is clearly to include more cbm functions into maintenance repair and overhaul mro processes so better cost control can be achieved without ever comprising passenger safety
