between the opposing claims of reason and religious subjectivity may be a middle ground william j wainwright argues his book is a  
philosophical reflection on the role of emotion in guiding reason there is evidence he contends that reason functions properly only  
when informed by a rightly disposed heart the idea of passional reason so rarely discussed today once dominated religious  
reflection and wainwright pursues it through the writings of three of its past proponents jonathan edwards john henry newman and  
william james he focuses on edwards whose work typifies the christian perspective on religious reasoning and the heart then in his  
discussion of newman and james wainwright shows how the emotions participate in non religious reasoning finally he takes up the  
challenges most often posed to notions of passional reason that such views justify irrationality and wishful thinking that they can t  
be defended without circularity and that they lead to relativism his response to these charges culminates in an eloquent and  
persuasive defense of the claim that reason functions best when influenced by the appropriate emotions feelings and intuitions

at the centre of our ethical thought stands the human being roger teichmann examines the ways in which facts about human

nature determine the shape of ethical concepts such as rationality virtue and happiness he argues that only by attending to the social and empirical character of language use can we address a number of problems in ethics

an original study of the philosophical problems associated with inductive reasoning like most of the main questions in epistemology the classical problem of induction arises from doubts about a mode of inference used to justify some of our most familiar and pervasive beliefs the experience of each individual is limited and fragmentary yet the scope of our beliefs is much wider and it is the relation between belief and experience in particular the belief that the future will in some respects resemble the past and the unobserved the observed which forms the subject of this book dr blackburn s first aim is to state the problem of induction properly to show that there does exist a genuine problem immune to the solutions in vogue at present yet no tin principle insoluble he gives an extended and original account of the concept of a reason and goes on to discuss prediction in the end dr blackburn produces a rationale for belief in certain short term predictions based on his reinterpretation of the classical principle of indifference he claims that a justification for induction can be found along the lines he has suggested and must indeed be found there if anywhere
