this collection offers new research findings innovations and industrial technological developments in extractive metallurgy energy and environment and materials processing technical topics included in the book are thermodynamics and kinetics of metallurgical reactions electrochemical processing of materials plasma processing of materials composite materials ionic liquids thermal energy storage energy efficient and environmental cleaner technologies and process modeling these topics are of interest not only to traditional base ferrous and non ferrous metal industrial processes but also to new and upcoming technologies and they play important roles in industrial growth and economy worldwide

a unified bayesian treatment of the state of the art filtering smoothing and parameter estimation algorithms for non linear state space models

global demand for mineral fertilizers is continuously increasing while large amounts of organic wastes are being disposed without use as a resource resulting in soil water and air pollution current trends of intensification expansion and agglomeration of livestock production result in a net import of nutrients that lead to a surplus in some production areas therefore new processes and technologies to recover and re use nutrients from both solid and liquid wastes are desirable to close the loop on the nutrient cycle in modern human society and address future scarcity of non renewable nutrients and fossil based fertilizers this research topic aims to present scientific progress regarding processes and technologies that allow recovery and re use of nutrients from wastes the selective recovery of mineral nutrients ammonia and phosphates the production of new organic fertilizers and evaluation of their relative agronomic efficiency the articles within provide a stronger recognition of the importance of nutrient recovery and upcycling in the new horizons of the circular economy
