school were unable to explain the causes of economic events such as the german inflation after world war i was an added reason for him to turn to economic theory he became among german economists the foremost opponent of the historical school which he criticised in several publica tions through his writings and his teaching he contributed his share to the revival of interest in economic theory which was noticeable in the twenties and he was one of the few economists left in germany who helped to keep this interest alive during the thirties and during world war ii during this time he published kapitaltheoretische untersuchungen 1936 and the present volume which immediately gave rise to an extensive discussion in german economic journals

it is widely recognised that mainstream economics has failed to translate micro consistently into macro economics and to provide endogenous explanations for the continual changes in the economic system since the early 1980s a growing number of economists have been trying to provide answers to these two key questions by applying an evolutionary approach this new departure has yielded a rich literature with enormous variety but the unifying principles connecting the various ideas and views presented are as yet not apparent this 2005 volume brings together fifteen original articles from scholars each of whom has made a significant contribution to the field in their common effort to reconstruct economics as an evolutionary science using meso economics as an analytical entity to bridge micro and macro economics as well as static and dynamic realms a unified economic theory emerges
