developmental biology has been transformed recently by discoveries in the fields of

molecular biology cell biology and immunology new ways of manipulating mammalian development are uncovering control mechanisms and enabling us to apply them in solving practical problems in animal production and human health this book outlines some of these new manipulations and how they have contributed to the present state of developmental biology chapter 1 describes gene transfer by micro injection of cloned recombinant dna into zygotes although the factors that affect transformation frequencies and integration sites are still unknown such techniques offer a number of exciting prospects research models for human disease could be artificially created and desirable characteristics in agricultural animals could be hanced the theme of cell to cell transfer is continued in chapters 2 and 3 chapter 2 describes pronuclear transplantation by sendai virus induced fusion of the karyoplast with the enucleated embryo using this procedure it has been demonstrated that both male and female genomes are essential for normal development although the reason for this is not yet understood chapter 3 describes studies on the fusion of whole oocytes

upon opening this book for the first time and glancing at the table of contents students are presented with chapter titles that reflect all the crucial subject matter of what it takes to be a school counselor examples of national models and paradigms all designed to make the profession manageable and understandable are on display throughout the book the authors have incorporated the human side of school counseling at the core of every chapter hoping not to block the spirit of caring for people by what at first glance might appear to be academic jargon this book is designed as a means for graduate students and others to lend their voices to the issues confronting school counselors and most importantly to chart the course for invention in school counseling the authors believe that the school counseling profession is enriched when the voices of aspiring professionals meet the voices of experience with the aim of creating new ways to serve for future school counselors

volume 5 of cerebral cortex completes the sequence of three volumes on the individual functional areas of the cerebral cortex by covering the somatosensory and motor areas however the chapters on these areas lead naturally to a series of others on patterns of connectivity in the cortex intracortical and subcortical so that the volume as a whole achieves a much broader viewpoint the individual chapters on the sensory motor areas reflect the considerable diversity of interest within the field for each of the authors has given his or her chapter a different emphasis reflecting in part topical interest and in part the body of data resulting from work in a particular species in considering the functional organization of the somatosensory cortex robert dykes and andre ruest have chosen to concentrate on the nature of the mapping process and its significance harold burton in his chapter on the somatosensory fields buried in the sylvian fissure shows how critical is an understanding of this mapping process in the functional subdivision of the cortex a frequently overlooked subdivision of the cortex the vestibular region is given the emphasis it deserves in a chapter by john fredrickson and allan rubin the further functional subdivisions that occur within the first somatosensory area are given an anatomical basis in the review by edward jones of connectivity in the primate sensory motor cortex
