psychology library editions child development 20 volume set brings together a diverse number of titles across many areas of developmental psychology from children s play to language development the series of previously out of print titles originally published between 1930 and 1993 with the majority from the 70s and 80s includes contributions from many respected authors in the field and charts the progression of the field over this time

the topic addressed in this volume lies within the study of sentence processing which is one of the major divisions of psycholinguistics the goal has been to understand the structure and functioning of the mental mechanisms involved in sentence comprehension most of the experimental and theoretical work during the last twenty or thirty years has focused on first pass parsing the process of assigning structure to a sentence as its words are encountered one at a time from left to right one important guiding idea has been to delineate the processing mechanisms by studying where they fail for this purpose we identify types of sentences which perceivers have trouble assigning structure to an important class of perceptually difficult sentences are those which contain temporary ambiguities since the parsing mechanism cannot tell what the intended structure is it may make an incorrect guess then later on in the sentence the structure assignment process breaks down because the later words do not fit with the incorrect structural analysis this is called a garden path situation when it occurs the parsing mechanism must somehow correct itself and find a different analysis which is compatible with the incoming words this reanalysis process is the subject of the research reported here

this book examines a challenging problem at the intersection of theoretical linguistics and the psychology of language the interpretation of gradient judgments of sentence acceptability in relation to theories of grammatical knowledge acceptability judgments constitute the primary source of data on which such theories have been built despite being susceptible to various

extra grammatical factors through a review of experimental and corpus based research on a variety of syntactic phenomena and an in depth examination of two case studies elaine j francis argues for two main positions the first is that converging evidence from online comprehension tasks elicited production tasks and corpora of naturally occurring discourse can help to determine the sources of variation in acceptability judgments and to narrow down the range of plausible theoretical interpretations the second is that the interpretation of judgment data depends crucially on the theoretical commitments and assumptions made especially with respect to the nature of the syntax semantics interface and the choice of either a categorical or a gradient notion of grammaticality the theoretical frameworks considered in this book include derivational theories e g minimalism principles and parameters constraint based theories e g sign based construction grammar simpler syntax competition based theories e g stochastic optimality theory decathlon model and usage based approaches the volume shows that while acceptability judgment data are typically compatible with the assumptions of various theoretical frameworks some gradient phenomena are best captured within frameworks that permit soft constraints non categorical grammatical constraints that encode the conventional preferences of language users
