this thesis deals with natural slope movements of the earthflow type the main thematic
focus of the work is on the investigation of the so called source areas located in the upper
parts of the affected slopes on the basis of two present day and socio economically
relevant case studies in northern Italy selected aspects of the source areas were
investigated this was done mainly by means of numerical modelling in one case study the
numerical modelling concept was combined with an inverse modelling strategy generally
the results obtained in both case studies demonstrate the importance of detailed field
