reproductive biology is the basis of species improvement and a thorough understanding of this is needed for plant improvement whether by conventional or biotechnological methods this book presents an up to date and comprehensive description of reproduction in lower plants gymnosperms and higher plants it covers general plant biology pollinatio

studies in floral biology are largely concerned with how flowers function to promote pollination and mating the role of pollination in governing mating patterns in plant populations inextricably links the evolution of pollination and mating systems despite the close functional link between pollination and mating research conducted for most of this century on these two fundamental aspects of plant reproduction has taken quite separate courses this has resulted in suprisingly little cross fertilization between the fields of pollination biology on the one hand and plant mating system studies on the other the separation of the two areas has largely resulted from the different backgrounds and approaches adopted by workers in these fields most pollination studies have been ecological in nature with a strong emphasis on field research and until recently few workers considered how the mechanics of pollen dispersal might influence mating patterns and individual plant fitness in contrast work on plant mating patterns has often been conducted in an ecological vacuum largely devoid of information on the environmental and demographic context in which mating occurs mating system research has been dominated by population genetic and theoretical perspectives with surprisingly little consideration

given to the proximate ecological factors responsible for causing a particular pattern of mating to occur

this bulletin based on contributions from various contributors and edited by dr d w roubik introduces the reader to various aspects of natural and insect pollination it discusses the pollinators themselves and the ecological and economic importance of pollination as well as applied pollination in temperate tropical oceanic islands and mainland tropics and alternatives to artificial pollinator populations prospects for the future are also discussed chapter 2 deals with successful pollination with pollinator populations the evaluation of pollinators and floral biology and research techniques the behaviour of pollinators and plant phenology and various case studies on the preparation of pollinators for use in tropical agriculture are also discussed a glossary and various appendices regarding cultivated and semi cultivated plants in the tropics pollination contracts and levels of safety of pesticides for bees and other pollinators are included
