excerpt from the course of operative surgery a handbook for practitioners and students the course of surgical operations has recently undergone many changes originally the teaching was confined to the ligation of vessels typical operations on the limbs and a few facial and cranial resections these operations used to play an important part in the practice of surgery but with further progress they have given place to others more frequently performed and therefore more essential the surgical course was thus in need of a thorough modernizing many of the newer text

books have already taken account of the requirements but i think my friend and pupil professor schmieden has accomplished the work of modernizing in a peculiarly happy manner not neglecting the older and approved methods of interference or those ligations that are of practical import he has managed so to describe the main operations done on the subject that the graduate as well as the student may gain something which will last him through life and be profitable in practice the illustrations of all the operations are excellent i wish the book the widest circulation about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
