human dispersal human evolution and the sea is the first book length treatment of what has become known as the global palaeolithic seafaring debate until recently common consensus dictated that only in the last ten thousand years have humans routinely permanently and cross culturally traversed seas and oceans to colonize new lands new and sometimes contentious data from the mediterranean and island southeast asia challenge that consensus suggesting to some researchers that long distance voyaging is a behavior of great antiquity these scholars suggest that oceans and seas facilitated and encouraged planetary dispersal in our own genus rather than acting as barriers to dispersal if this model is correct it necessitates a radical rethinking of not only the big patterns of human history but also more deeply our models of emergent human behavior and when the capacity for highly complex and coordinated group behaviors emerged exploring the data in detail the authors here show how a complex series of interrelated problems has tended to be treated in reductionist or overly simplistic terms cherry and leppard elucidate this complexity by bringing to bear perspectives from archaeology ecology and evolutionary biology they demonstrate not only that a series of unique circumstances evolutionary behavioral environmental and economic conspired to drive mass ubiquitous global colonization over the last ten millennia but also that earlier sparser data provide real insight into key social and behavioral thresholds even if there is little evidence to support the oceans as highways model for species other than our own a major intervention in this important debate human dispersal human evolution and the sea explains the deep significance of the problem and the profound implications for history archaeology and biological anthropology
