the new question ten years after the worldwide bestseller *Good to Great* Jim Collins returns with another groundbreaking work this time to ask why do some companies thrive in uncertainty even chaos and others do not based on nine years of research buttressed by rigorous analysis and infused with engaging stories Collins and his colleague Morten Hansen enumerate the principles for building a truly great enterprise in unpredictable tumultuous and fast moving times the new study *Great by Choice* distinguishes itself from Collins's prior work by its focus not just on performance but also on the type of unstable environments faced by leaders today with a team of more than twenty researchers Collins and Hansen studied companies that rose to greatness beating their industry indexes by a minimum of ten times over fifteen years in environments characterized by big forces and rapid shifts that leaders could not predict or control the research team then contrasted these 10x companies to a carefully selected set of comparison companies that failed to achieve greatness in similarly extreme environments the new findings the study results were full of provocative surprises such as the best leaders were not more risk taking more visionary and more creative than the comparisons they were more disciplined more empirical and more paranoid innovation by itself turns out not to be the trump card in a chaotic and uncertain world more important is the ability to scale innovation to blend creativity with discipline following the belief that leading in a fast world always requires fast decisions and fast action is a good way to get killed the great companies changed less in reaction to a radically changing world than the comparison companies the authors challenge conventional wisdom with thought provoking sticky and supremely practical concepts they include 10xers the 20 mile march fire bullets then cannonballs leading above the death line zoom out then zoom in and the smac recipe finally in the last chapter Collins and Hansen present their most provocative and original analysis defining quantifying and studying the role of luck the great

companies and the leaders who built them were not luckier than the comparisons but they did get a higher return on luck this book is classic collins contrarian data driven and uplifting he and hansen show convincingly that even in a chaotic and uncertain world greatness happens by choice not by chance

in great by choice jim collins along with morten hansen explores why some companies not only survive but thrive in the face of uncertainty chaos and rapid change while others fail building on nine years of rigorous research the authors examine organizations operating in turbulent environments to identify the principles that distinguish exceptional performance from mediocrity through a combination of statistical analysis and compelling case studies collins and hansen reveal how discipline innovation and empirical rigor contribute to sustained success the book introduces concepts such as 10xers leaders who achieve results ten times greater than their industry peers and the critical behaviors that set them apart including fanatic discipline empirical creativity and productive paranoia it illustrates how companies can prepare for unpredictable challenges without succumbing to fear or speculation instead creating systems and cultures that encourage calculated risk taking and long term resilience rich with stories from companies that navigated extreme adversity great by choice demonstrates that greatness is not simply a product of luck or timing but of intentional strategies and principles consistently applied over time collins and hansen show that extraordinary results arise from leaders who combine vision with pragmatic discipline turning uncertainty into opportunity a hallmark of collins s work this book is data driven insightful and inspiring it provides both practical guidance and a motivational framework for leaders entrepreneurs and organizations aiming to flourish even when the future is unpredictable and the stakes are high
