in the research topic history of chemoattractant research we will portray some of the key discoveries that helped to transform cell migration research into a global playing field within immunology and beyond early progress had a profound effect on both academia and industry today numerous academic laboratories are fully engaged in compiling a detailed road map describing the highly complex network of immune and tissue cells that respond to chemoattractants industrial research on the other hand

centers on drugs that interfere with immune cell traffic in inflammatory diseases and cancer the following series of short stories provide personal accounts on key discoveries the individual molecular discoveries enabled numerous research laboratories worldwide to unravel their significance in steady state or pathological immune processes although ground breaking in their own right it is therefore worth emphasizing that rapid progress in chemoattractant research was made possible by many other laboratories who were not directly involved in the original discovery process therefore the authors of this mini series are discussing their findings in the context of time place and subsequent progress enabled by their discoveries it is hoped that a wide readership will find these accounts entertaining as well as educational although those who wish to gain a more detailed knowledge are referred to the many outstanding reviews on chemokines and other chemoattractants

nuclear localization of growth factors and of monoclonal antibodies focuses on how an additional class of chromatin receptors is directly involved in mediation of the action of growth factors on the gene regulation level the book describes a new intracellular pathway of growth factors and presents methods for identifying nuclear antigens with an epitopic homology of the cell surface antigens it teaches how to distinguish monoclonal antibodies that penetrate the cell and localize in the nucleus from those that act only on the cell surface new light is shed on the mechanisms of malignant transformation and new approaches to developing anti cancer and anti hiv drugs are covered the book will be important for oncologists biochemists cell biologists pharmaceutical researchers investigative pathologists neurochemists and immunologists
