this book introduces architectural applications of parametric methods in design drawing direct connections between each phase of the architectural design process with relevant parametric approaches readers will find applications of parametric methods with straightforward explanations of concepts commands as well as applicable examples for each phase of the architectural design process in addition to learning about the historical and conceptual background of parametric design readers can use this book as a go to source during their day to day design practice chapters are organized according to different phases of the architectural design process such as site analysis spatial organization skin systems and environmental performance analyses together they deliver concepts applications and examples utilizing in depth visual guides that explain commands their outcomes and their interrelationships with over 350 images this book includes examples from the author s own design studio and parametric design teaching in elective classes based on the rhinoceros and grasshopper platforms this book is an accessible yet in depth resource for architecture students and early professionals who are considering integrating parametric applications into their design processes

designed to help company managers build faster and more productive cnc departments this state of the art guide outlines the main problems when dealing with computer numerical control equipment and examines organizational concepts and strategies that can be used to achieve maximum efficiency in the cnc department written by an educator with extensive hands on cnc programming and manufacturing engineering experience it offers the most advanced programming techniques available in any book of its kind organizes material in a very logical progression with each chapter building on the previous one for easy comprehension provides a well rounded treatment of cnc programming by offering a sound balance between basic and more advanced topics with thorough coverage of programming fundamentals machine set up manual tool radius compensation automatic tool radius compensation advanced programming concept of macro programming using computers in cnc programming and efficiency in the cnc department many practical programming examples help users learn important mathematical concepts and build competitive skills necessary for programming and operating today s cnc equipment for plant managers production managers and machine shop managers

edugorilla publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources specializing in competitive exams and academic support edugorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels

this book is created to help users of various 3d cam software and cnc machines to create programs for cnc machines major topics are programming of cnc machines using standard g and m code command each command is explained in detail and presented with detailed subsequent images for each small step that helps reduce possible misinterpretations an effort was made to explain command programming sequence and requirements while keeping the description to the minimum

features 45 of the latest manufacturing technologies

recent rapid globalisation of manufacturing industries leads to a drive and thirst for rapid advancements in technological development and expertise in the fields of advanced design and manufacturing especially at their interfaces this development results in many economical benefits to and improvement of quality of life for many people all over the world technically speaking this rapid development also create many opportunities and challenges for both industrialists and academics as the design requirements and constraints have completely changed in this global design and manufacture environment consequently the way to design manufacture and realise products have changed as well the days of designing for a local market and using local suppliers in manufacturing have gone if enterprises aim to maintain their competitiveness and global expansion leading to further success in this global context and scenario both industry and the academia have an urgent need to equip themselves with the latest knowledge technology and methods developed for engineering design and manufacture to address this shift in engineering design and manufacture supported by the european commission under the asia link programme with a project title fastahead a framework approach to strengthening asian higher education in advanced design and manufacture three key project partners namely the university of strathclyde of the united kingdom northwestern polytechnic university of china and the troyes university of technology of france organised a third international conference
